

Catherine Gourlaouen For LD51

As a believer in God, it is my duty and my full right to follow the recommendations made in the Bible, which is a manual filled with useful and indispensable knowledge, left by our creator for the well-being of humans.

Concerning my physical, mental and spiritual health, as well as that of my family, I have therefore chosen to trust entirely in God, and in His creation like the nature, especially since our body and our spirit must remain sane.

The pharmaceutical industry (pharmakeia in Greek, mentioned several times in the Bible as sorcerers) manufactures artificial medicines, synthetic products, vaccines containing all kinds of toxic products, as well as extremely dangerous heavy metals. I paid the price in my life, with a severe mercury poisoning, even Multiple Sclerosis (M. S.) and it is by miracle that I am alive today.

It is therefore my right that I have chosen natural remedies to heal myself and my children in an effective and gentle way, rather than synthetic chemical drugs that can make us sick.

Louis Pastor on his deathbed said, "Bernard was right, the microbe is nothing, the field is everything." (The field of the body).

Our immune system is there to defend our body against the enemy, so that we stay healthy. Air, light, water, plants and food are necessary for life and for our well-being.

God has thought of everything, our health included.

Here a powerful example:

Professor Robert Masson explained during a speech at the Sorbonne in Paris, how the infant who has no immune system, receives immune protection directly from his mother. During breastfeeding, the baby moistens his lips to not only create nipple suction, but to actually transmit a sample of his saliva captured by sensors positioned on the periphery of the nipple. The mother's body, a veritable natural laboratory, analyzes the baby's saliva and five minutes later returns the necessary antibodies to the milk to ensure the baby's immediate good health. And Professor Masson made the whole assembly laugh by adding this: "Ask a rubber pacifier to do the same thing! ".

And I will conclude with this saying: "Everyone sees noon at his doorstep", which means just as our perception of time varies depending on where we are, so our perception of things varies depending on our personal situation and beliefs.

Everyone judges the situation according to their opinion, experience, or criteria.

And everyone has the right to choose how they care for themselves and their own family.

It is part of our fundamental freedom. And to preserve this freedom, it is therefore essential that we have, in this case, a vaccine exemption whether for religious reasons for some or philosophical for others.

Athlete Collapses and Deaths, 2021—23

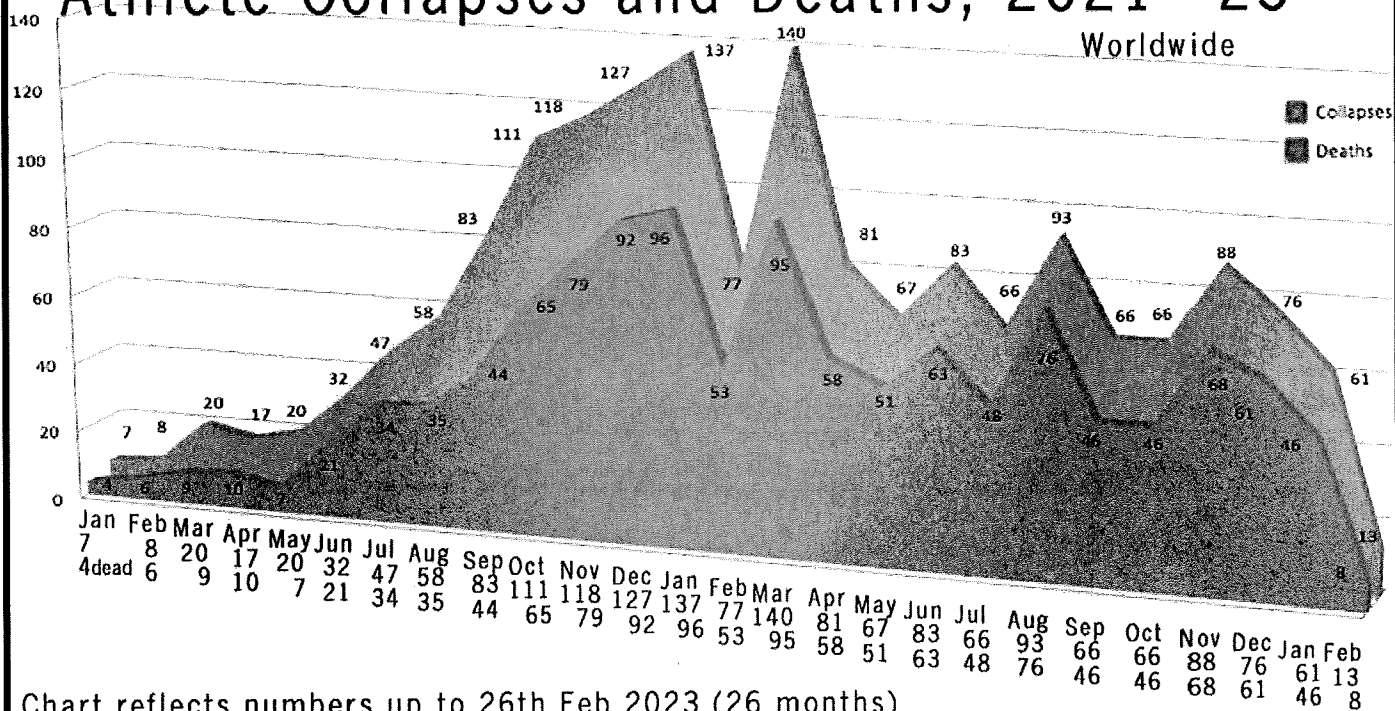

Chart reflects numbers up to 26th Feb 2023 (26 months)

1762+ discovered, 1221+ dead
