Re: Support for Legislation Expanding Naturopathic Scope of Practice

I am writing to urge your strong support for the bill authorizing licensed naturopathic doctors (NDs) in Maine to administer IV medications. As a resident of this state, I believe expanding the scope of practice for NDs is essential for modernizing our healthcare system and ensuring patient safety through regulated, professional care.

Naturopathic doctors undergo rigorous medical training and are uniquely positioned to provide integrative treatments. Allowing them to perform IV therapy ensures that patients can receive these specialized treatments from their primary care providers in a safe, clinical environment.

Furthermore, I strongly advocate for insurance parity regarding naturopathic services. Patients should have the freedom to choose their preferred licensed provider without facing financial barriers. It is vital that insurance companies be required to cover services provided by NDs to the same extent they cover other primary care physicians.

I ask you to vote in favor of this legislation to improve healthcare access and choice for all Maine citizens. Thank you for your time and for your service to our community.

Sincerely,

Kimberly Moreau
