

Diane Hines
Hammond

We support Senator Jackson's ban on aerial spraying of glyphosate and other synthetic herbicides for the purpose of silviculture.

The information is proven world wide that this chemical is toxic.

Health concerns range wide: irritable bowel disease, hypertension, kidney disease, obesity, depression, ADHD, autism, cancer, Alzheimer's disease, Parkinson's, ALS, cache is, infertility and developmental malformations...

Need I go on? We all know someone suffering from these diseases.

Roundup is used too liberally to control growth of weeds and trees.

Cows laying on corn stalks from corn sprayed by roundup lose their skin. We are fortunate to have been informed of this killer chemical years ago and have chosen to avoid foods that come from crops sprayed with glyphosate. Look at our weak population dying from covid19.

Why are we so weak? They say pre-existing illness makes one more vulnerable.

Please look at the big picture when you vote on this bill.
