Please vote ought to pass on LD 125. Glyphosate spraying is dangerous to both humans and wildlife and is known to cause serious health issues including endocrine disruption and chromosome damage. Chemicals which threaten the health of our youngest Mainers have no place in forest management. In addition, glyphosate threatens many endangered species. Herbicide spray drift is known to affect living things and farms that are miles away from where chemicals are deployed.

Please protect the health of my grandchildren and yours by sending LD 125 on to a floor vote.
