I encourage you to support L.D. 437. Healthy soil plays a crucial role in helping our farming communities adapt to climate changes. Without resilient farms, our food security is at risk. This legislation goes beyond what happens at the farm - it impacts the food that we all eat at home. A coordinated statewide program such as the one included in this proposal would have a significant impact on the ability of Maine farmers to implement healthy soil practices - a key element in adapting to climate change. I encourage your support of this groundbreaking legislation.
