

Eric Paetow
Whitefield

For better or worse, Americans have the RIGHT to refuse supposed help from our government. The government or in this case Forestry Service CAN NOT implement anything it considers best without our consent or approval. As we are seeing with the fight against Covid, the government can not require vaccinations. We have the right to refuse.

Spraying Glyphosate (carcinogen) strictly for the monetary gain of the pulp industry is a crime against nature. Destroying the ecological diversity of our forests will destroy the future of Maine. Spraying Maine's woodlands with herbicide, killing off dozens of species to make it cheaper to clear cut is just wrong.

Please act now for the benefit of all present and future Mainers and stop the unwanted poisoning.

Sincerely
Eric Paetow
