There is not a problem with pesticides in Maine. FY 17, there were only 51 complaints, FY 18 = 73 and FY 19 = 56. (Data not available for FY20) Out of the million plus population in the state of Maine that is all complaints according to Pesticide Control Board. However, activists would like you to think that there is a problem. They would like to use a registry to make work harder and their job easier. I oppose LD 1599.
