As a Commercial Master Applicator for over 30 years in the State of Maine I am completely confused as to the necessity of this Bill. I submit an annual report to the state of all pesticides used, total amounts used and square footage of applications. This seems like overkill and More government control. We have an existing registry that has been used for years and has worked very well in communicating to concerned citizens of upcoming applications. Not sure why we are trying to reinvent the wheel. I have ways used IPM and spray only when necessary. This Bill should not go forward.

Respectfully,  
Jim Hodge
