LD 856

Please support LD 856 as amended so that solar projects will be sited with the conservation of agricultural land and natural resources in mind. This is common sense. We are losing agricultural land to PFAS contamination. It only makes sense to site solar projects on land that can't be used to grow food.

Last week I was in Ellsworth and saw two solar projects on land that was intact forest before it became solar installations. That doesn't seem intelligent. We can do better.

Thank you.
