LD 2013

I support LD 2013 because I believe that farms that have soil contaminated with PFAS (Perfluoroalkyl and Polyfluoroalkyl substances) should receive financial compensation for the financial losses incurred by this seasons, and further seasons, crop losses. Furthermore, I hope that the state prohibits the practice of spreading municipal sludge throughout the state, contaminating our drinking water and poisoning our soil. Support should be given to farmers afflicted with positive PFAS tests in soils and water to ensure that farming continues to be a viable business in this state.
