

LD2013

To the Agriculture Conservation and Forestry committee,

The hard-working farmers of this state are facing a devastating reality that is PFAS contamination. Maine is blessed to have so many farmers keeping the land productive, and creating resilient communities through an abundance of local food. It is critical that we help them in these trying times as they navigate a path forward for their businesses and their families. I ask that you vote to pass LD2013 and provide financial assistance to farmers who create so much value for our state. They need our help and the people of Maine want to see them receive the support they deserve.
