

Doris Luther
Hollis, Maine
LD 2013

The future of farming in Maine depends on how we meet the challenges of PFAS contamination on our farms and farmland. Our farmers need robust support to address the health and financial impacts of PFAS contamination, and Maine needs robust support for research and remediation so that we have the farmland we need for our future. LD 2013 would provide that assistance by establishing a fund and associated advisory committee to invest \$100 million in farmer support.
