Morrill
LD 2013

On Bill LD 2013:

I am a grower and a resident of Waldo County and have been working in agriculture for the past decade. My heart breaks for the growers who have discovered PFAS contamination on their land, in their water, in their food and in their own bodies. I think about what these farmers are going through every day and I can't stomach the injustice that they are experiencing after sacrificing so much to provide our community with healthy food just to find out that their land, their water, their food, their livelihoods, and their own bodies have been poisoned. It's a tragedy in our community and we need to pass LD 2013 immediately to provide meaningful support to those facing this difficult challenge so that they can stay afloat while we work together as a community to get rid of these toxins in our food system.
