I support HP 854. Rapid Fire Modification Devices on Guns needs to be prohibited in this state. In just a few years, our public schools are no longer safe for children. The idea that parents have to worry about whether or not their child will come home at the end of the school day without being shot just shows what a terrible direction this country has taken. And teachers should not be in a position where they could be killed just by teaching or that the children in their class could be killed. We need to do everything we can to lessen the risk from deaths by shooting. We are not at war and yet the leading cause of death in children is from firearms. It has surpassed drugs, traffic accidents, and drowning, and all other causes including respiratory diseases.
