

Rebecca Cummings
Windham
LD 51

As a registered nurse in the state of Maine, and possessing over ten years of experience as an elementary school nurse, I SUPPORT medical and philosophical immunization exemptions. Individuals have a right to refuse medication(s). Patients cannot and should not be forced to take an experimental vaccine/medication only available under emergency use authorization for which our government LIED about there not being at least one known effective treatment. I urge this committee to restore medical and philosophical exemptions effective immediately.
