PFAS pollution in waterways, in sludge spread on farmland, and in bodies of those in harm's way is in the news every day, and is the subject of many lawsuits. These perfluorinated chemicals pose an occupational hazard especially for firefighters. Reporting them is the least we should expect; in truth, they should be BANNED.

Constrained by time limits at a library computer, I leave to others the task of searching out and submitting to you the many academic studies that attest to the unacceptable risks of PFAS. Please support LD 960 without weakening amendments.
