

**Testimony in Support of LD 1541,
An Act to Support and Improve Municipal Recycling Programs
and Save Taxpayer Money**

Sarah K. Nichols, NRCM Sustainable Maine Director, May 10, 2021

Senator Brenner, Representative Tucker, and members of the Joint Standing Committee on Environment and Natural Resources, my name is Sarah Nichols, and I am the Sustainable Maine Director for the Natural Resources Council of Maine (NRCM). I appreciate this opportunity to testify in strong support of LD 1541. The language is very similar to LD 2104, which was voted majority ought-to-pass by this Committee in the 129th Legislature but unfortunately did not receive a full vote by the 129th House and Senate due to the Covid-19 shutdown.

Maine’s municipal recycling programs are still struggling because of high costs to taxpayers and too much packaging; it is more urgent than ever to support and improve our recycling programs through passage of LD 1541.

According to the Maine Department of Environmental Protection (DEP), about 30-40% of the materials being managed by municipalities are packaging waste. Maine taxpayers pay *at least* \$16 million each year to manage packaging material through recycling or disposal.¹ The DEP also estimates that it costs an average of 67% more to recycle than dispose of packaging in the state.² Maine taxpayers and towns have no control over how much packaging material is landing in our waste stream. They simply pay the bill. Some towns can’t afford to do so anymore and are having to curb or cancel their recycling programs because disposal in a landfill or waste-to-energy plant is cheaper than recycling. Further, they are receiving a lot of packaging material that isn’t readily recyclable in Maine.

Our current system is broken and needs to be reformed, and that’s what LD 1541 will do. Producers of packaging currently have no responsibility to assist with the recycling and disposal costs of their packaging, and they have no incentive to design their packaging so that it is more readily recyclable. LD 1541 addresses these fundamental flaws in our current recycling system that will only get worse if not addressed now.

The bill internalizes the cost of end-of-life recycling for packaging waste by shifting these expenses to the responsible parties, the manufacturers themselves. Taxpayers should not shoulder this burden. Shifting the costs away from taxpayers will literally enable towns to retain their recycling programs. With passage of LD 1541, producer funding also would be available for education and infrastructure development.

² Source: [Maine Department of Environmental Protection’s Maine Solid Waste Generation and Disposal Capacity Report for Calendar Years 2018 & 2019](#)

Enacting LD 1541 is the single most important action that Maine lawmakers can take to greatly increase recycling rates in Maine:

Although Maine established a recycling rate goal of 50% more than three decades ago, our current recycling rate is only 36%. In contrast, recycling rates exceed 50% in jurisdictions that have adopted Extended Producer Responsibility (EPR) for Packaging laws such as the one that would be established by LD 1541. There are five provinces in Canada that have stewardship programs for packaging materials. As part of an expert technical briefing to this Committee on January 22nd, 2020, Resa Dimino, Senior Consultant at Resource Recycling Solutions, presented data showing that:

- Residential recycling rates in Canadian provinces immediately increased by an average of 8% following adoption of EPR for Packaging laws;
- Average recycling rates in these provinces after 2-4 years increased by 17%; and
- Average recycling rates after 8-10 years increased by 29%.

Further, data from jurisdictions where producers are responsible for recycling costs shows that the overall total cost per capita for recycling is about the same as it is here in Maine, where we have a taxpayer-funded system, yet those EPR jurisdictions have much higher recycling rates. This evidence is illustrated in the attached table, which shows that producer-funded recycling programs are more cost-effective than Maine's taxpayer-funded system and lead to much higher recycling rates.

LD 1541 has a workable stewardship model, with fairness for all stakeholders and transparency at its core:

- The DEP would contract with a single stewardship organization (SO) to equitably fulfill the responsibilities of the program, rather than let producers set up a system that works only for them. The primary role of the SO would be to collect fees from producers of packaging based on the weight and type of materials; and then use those funds to reimburse municipalities for the costs they have incurred for recycling packaging. The SO would also provide technical assistance to both producers and municipalities to maximize overall program efficiency. (Section 3)
- To have a transparent, fair, and effective stewardship model, the details of the program including how fees would be set for producers and how reimbursements are made to municipalities; what materials are readily recyclable; as well as overall program goals would be done by a public Department rulemaking process. (Section 13)
- The program is designed to continually improve over time as performance data is generated. Information provided in annual reports to the DEP from the SO would include the total amount of packaging material that are collected by municipalities for recycling, and how much of that material is recycled. There would be regular audits of Maine's waste, recycling, and litter to ground truth the figures provided by producers and give the State more insight into our waste problem so that we can continually improve the system over time. (Sections 5 and 13)

LD 1541 creates a municipal reimbursement program, with financial and technical assistance to all participating municipalities:

- Participation in the EPR program would not be mandatory for municipalities. If a municipality chooses to participate, it would need to recycle each readily recyclable material, meaning material that has a reliable market, at a minimum; and provide necessary information to the SO in order to be reimbursed. (Section 9)
- Participating municipalities would be reimbursed annually for their cost of recycling packaging materials that they have already paid; so there is no compelling reason to require that they spend their reimbursement money on a specific purpose. (Section 10)
- Each municipality would receive technical assistance from the SO for increasing access and education and improving recycling collection rates. (Section 3, A1b)
- Grants would be awarded each year, primarily using funds generated from producer fees for packaging that is not readily recyclable. Grants will prioritize projects that support Maine’s Solid Waste Management hierarchy under section 2101—which begins with waste reduction, reuse, and recycling. (Section 11)

LD 1541 protects Maine’s small businesses:

- The bill exempts small producers who earn less than \$2 million in gross revenue or sell less than one ton of packaging material to consumers in Maine, or businesses that do the majority of sales through salvage and liquidations, like Mardens. (Section 2)
- The bill also creates financial certainty for low-volume producers, who sell more than one ton but less than 15 tons of packaging. These producers could opt to pay a flat fee of no more than \$500 per ton of total packaging each year. This provision helps provide smaller companies with a clear understanding of their maximum financial obligations under the law. (Section 1, Section 6c, Section 13, A 1b)
- The SO would assist the producers in helping them reduce fees from changes in packaging design elements. (Section 3, A 1a)

LD 1541 creates the right incentives for more waste reduction, reuse, and recycling:

- Producer payments will be reduced through an “eco-modulated” fee structure, which incentivizes less packaging, reuse of packaging, recycling of packaging, reduced toxicity, and increased post-consumer recycled content in packaging; as well as packaging with clear and accurate disposal instructions or other design characteristics that reduce contamination and consumer confusion. (Section 6D)
- Program performance standards will be set through rulemaking that have goals for producers to reduce and improve packaging, municipalities to increase recycling access and education, and overall program goals including increasing recycling collection and actual recycling of that material (Section 13 A,5). Performance standards will inform how fees are set, where grant funds should be invested, and how to improve the system over time.
- LD 1541 helps to support recycling markets. Readily recyclable packaging means there is a stable market for that material, and each participating municipality would have to collect everything on that list, which will also work to make education and outreach easier (Section 9A). The bill also creates a financial incentive for producers to use

readily recyclable packaging, as well as to use post-consumer recycled content in packaging, which drives demand for materials collected for recycling in Maine (Section 6D).

- In order to move more materials out of the municipal waste stream, the bill allows for alternative collection programs for materials that aren't readily recycled by municipalities. This provision will give producers the option of setting up a new collection program as they work to make their packaging more recyclable and help create markets for their packaging within three years. (Section 8)
- The program would increase consumer confidence in recycling. The SO would collect data on material sold into Maine, how much was collected for recycling, and how much of that collected material was indeed recycled (Section 13, A, 5). There would be regular audits of what's in our waste, recycling, and litter in Maine to ground-truth the figures and provide more insight into how the system can be continually improved over time (Section 3,A, 8).

In closing, I would like to emphasize that LD 1541 is strongly supported by Maine municipalities, people, businesses, and the environmental community.

- Twenty-nine municipalities, representing more than 325,000 Maine residents, have [adopted municipal resolutions](#) urging Maine to adopt an EPR for Packaging law (see attached).
- Fifteen [Maine businesses support](#) this model of EPR for Packaging, see business sign-on letter attached to my testimony.
- And 2,253 people have [signed a petition urging lawmakers to enact an EPR for Packaging law](#). The petition letter and signatures are attached to the end of my testimony.
- LD 1541 is a priority bill for Maine's Environmental Priorities Coalition, which is a partnership of 32 environmental, conservation, and public health organizations representing more than 100,000 members who work to protect the good health, good jobs, and quality of life that our environment provides.

I appreciate the work of this Committee and urge you to vote Ought to Pass on LD 1541, so that Maine communities and taxpayers receive the support they need to maintain and strengthen recycling in Maine, now and into the future. I would be happy to answer any questions that you may have.

COMPARISON OF COSTS AND EFFECTIVENESS OF A SAMPLE*** OF EPR FOR PACKAGING LAWS

| Jurisdiction | Years in Place | Net Cost of Program (2017)* | People Served | Number of Producers | 2017 Annual Per Capita Cost (USD) | Percent Taxpayers Pay | Recovery Rate |

Dear Senator Brenner, Representative Tucker, and distinguished members of the Joint Standing Committee on the Environment and Natural Resources,

Below is a list of Maine cities and towns, representing more than 325,000 residents from across the state, that have passed resolutions in support of the adoption of an Extended Producer Responsibility for Packaging law to save taxpayers money and improve the effectiveness of recycling as described in LD 1541: An Act To Support and Improve Municipal Recycling Programs and Save Taxpayer Money.

Maine's municipalities have been unfairly forced to shoulder the burden of the nation's recycling problems and it is time for big corporations to do their part.

**Bangor City Council Supports LD 1541 and is finalizing municipal resolution language on May 10, 2021 at their evening council meeting.*

**Portland City Council's Legislative Committee has directed City staffers to testify in support of LD 1541 in lieu of adopting a municipal resolution.*

Resolution of the Bar Harbor Town Council

Whereas, Maine's communities are struggling to maintain, expand, and in some cases are eliminating, recycling programs due to rising costs and difficult-to-manage materials; and

Whereas, product packaging, which includes plastic, metal, glass, and cardboard, constitutes approximately 30-40% of the materials managed by weight in Maine's municipal waste management programs; and

Whereas, Maine taxpayers currently unfairly bear 100% of the cost and pay an estimated \$16 million to \$17 million each year to finance the management of this material through fragmented and increasingly expensive disposal or recycling options; and

Whereas, producers of product packaging have little incentive to minimize wasteful packaging or increase access to recycling; and there is no organized coordination between the producers of packaging and municipalities that are responsible for disposing of or recycling the packaging materials; and

Whereas, producers of product packaging have taken some or all responsibility for the management of post-consumer packaging in other parts of the world, including all European Union member states and five provinces in Canada, and, as a result, have greatly increased recycling rates, expanded infrastructure investment, created jobs, and reduced taxpayer costs;

Now, Therefore Be It Resolved,

We, Maine's municipalities, support an Extended Producer Responsibility (EPR) for Packaging law. We believe that this policy will work to make recycling in Maine:

More effective: Producers of packaging materials would have a direct economic incentive to produce less-wasteful packaging that can easily and profitably be managed by municipal recycling programs. Having shared responsibility between those who create the waste and those who manage the waste would foster recycling system improvements and enable greater participation in recycling across Maine;

More sustainable: An EPR law for packaging is an insurance policy for Maine municipalities when global recycling markets are unfavorable. The current approach to recycling is not resilient to fluctuations in the global recycling market. When commodity prices fall unexpectedly, towns and cities may be forced stop or restrict their programs; and

More equitable: Maine's cities, towns, and taxpayers are currently footing the bill for a problem they didn't create. With recycling reform, taxpayers will no longer pay for the cost of recycling since the net costs of recycling would be reimbursed—and the packaging manufacturers that produce less-wasteful, more recyclable packaging would pay less than those who do not. This is a much more equitable way to distribute costs.

Resolution to support Municipal Recycling Programs

Whereas, Maine's communities are struggling to maintain, expand, and in some cases are eliminating, recycling programs due to rising costs and difficult-to-manage materials; and

Whereas, product packaging, which includes plastic, metal, glass, and cardboard, constitutes approximately 30-40% of the materials managed by weight in Maine's municipal waste management programs; and

Whereas, Maine taxpayers currently unfairly bear 100% of the cost and pay an estimated \$16 million to \$17 million each year to finance the management of this material through fragmented and increasingly expensive disposal or recycling options; and

Whereas, producers of product packaging have little incentive to minimize wasteful packaging or increase access to recycling; and there is no organized coordination between the producers of packaging and municipalities that are responsible for disposing of or recycling the packaging materials; and

Whereas, producers of product packaging have taken some or all responsibility for the management of post-consumer packaging in other parts of the world, including all European Union member states and five provinces in Canada, and, as a result, have greatly increased recycling rates, expanded infrastructure investment, created jobs, and reduced taxpayer costs;

Now, Therefore Be It Resolved,

We, The Select Board of the Town of Bethel, Maine, support an Extended Producer Responsibility (EPR) for Packaging law as endorsed by the Legislature in 2019 through the passage of the Resolve, To Support Municipal Recycling Programs (LD 1431). We believe that this policy will work to make recycling in Maine:

More effective: Producers of packaging materials would have a direct economic incentive to produce less-wasteful packaging that can easily and profitably be managed by municipal recycling programs. Having shared responsibility between those who create the waste and those who manage the waste would foster recycling system improvements and enable greater participation in recycling across Maine;

More sustainable: An EPR law for packaging is an insurance policy for Maine municipalities when global recycling markets are unfavorable. The current approach to recycling is not resilient to fluctuations in the global recycling market. When commodity prices fall unexpectedly, towns and cities may be forced stop or restrict their programs; and

More equitable: Maine's cities, towns, and taxpayers are currently footing the bill for a problem they didn't create. With recycling reform, taxpayers will no longer pay for the cost of recycling since the net costs of recycling would be reimbursed—and the packaging manufacturers that produce less- wasteful, more recyclable packaging would pay less than those who do not. This is a much more equitable way to distribute costs.

Whereas, Maine taxpayers currently unfairly bear 100% of the cost and pay an estimated \$16 million to \$17 million each year to finance the management of this material through fragmented and increasingly expensive disposal or recycling options; and

Whereas, producers of product packaging have little incentive to minimize wasteful packaging or increase access to recycling; and there is no organized coordination between the producers of packaging and municipalities that are responsible for disposing of or recycling the packaging materials; and

Whereas, producers of product packaging have taken some or all responsibility for the management of post-consumer packaging in other parts of the world, including all European Union member states and five provinces in Canada, and, as a result, have greatly increased recycling rates, expanded infrastructure investment, created jobs, and reduced taxpayer costs.

Now, Therefore Be It Resolved:

The City of Ellsworth, a municipality of Maine, does hereby support an Extended Producer Responsibility (EPR) for Packaging law as endorsed by the Legislature in 2019 through the passage of the Resolve, To Support Municipal Recycling Programs (LD1431). We believe that this policy will work to make recycling in Maine:

More effective: Producers of packaging materials would have a direct economic incentive to produce less-wasteful packaging that can easily and profitably be managed by municipal recycling programs. Having shared responsibility between those who create the waste and those who manage the waste would foster recycling system improvements and enable greater participation in recycling across Maine;

More sustainable: An EPR law for packaging is an insurance policy for Maine municipalities when global recycling markets are unfavorable. The current approach to recycling is not resilient to fluctuations in the global recycling market. When commodity prices fall unexpectedly, towns and cities may be forced to stop or restrict their programs; and

More equitable: Maine’s cities, towns and taxpayers are currently footing the bill for a problem they did not create. With recycling reform, taxpayers will no longer pay for the cost of recycling since the net costs of recycling would be reimbursed – and the packaging manufactures that produce less-wasteful, more recyclable packaging would pay less than those who do not. This is a much more equitable way to distribute costs.

Dale Hamilton, City Council Chair/Mayor

Date:

TOWN OF FALMOUTH RESOLUTION
*For the Town of Falmouth to Support LD 2104, an Extended Producer
Responsibility (EPR) for Packaging Law*

- WHEREAS,** packaging, which includes plastic, metal, glass and cardboard, constitutes approximately 30-40% of the materials managed by weight in Maine's municipal waste management programs. However, producers are not designing packaging that can be profitably recycled; and
- WHEREAS,** global recycling markets have experienced recent changes resulting in local challenges to process recyclable materials in feasible ways and exposure of flaws in how recycling has been managed. Taxpayers currently pay 100% of the cost and an estimated \$17 million each year to manage these materials through increasingly expensive disposable and recycling options and municipalities are also responsible for disposing of or recycling the packaging materials; and
- WHEREAS,** the Maine Legislature passed LD 1431, a Resolve to Support Municipal Recycling Programs, in 2019, which aims to develop legislation to establish an extended producer responsibility law for packaging in the State; and,
- WHEREAS,** stakeholders are working together using the framework of LD 1431, to implement An Act to Support and Increase the Recycling of Packaging, LD 2104, which recognizes that there are more effective, more sustainable and more equitable ways of incentivizing producers to make packaged material that is easily recyclable; and
- WHEREAS,** producers of product packaging have taken some or all responsibility for the management of post-consumer packing through extended producer reforms in other parts of the world, including all European Union member states and five provinces in Canada; and, as a result, have greatly increased recycling rates, expanded infrastructure investment, created jobs, and reduced taxpayer costs; and
- WHEREAS,** through an extended producer responsibility law, producers of packaging materials would have a direct economic incentive to produce less-wasteful packaging that can easily and profitably be managed by municipal recycling programs, and
- WHEREAS,** implementation of a statewide Extended Producer Responsibility Program for packaging wastes would ensure that municipalities will be protected from unbalanced costs when global recycling markets are unfavorable, and taxpayers will no longer pay for the cost of recycling and the packaging manufacturers will be provided a more equitable way to distribute costs.

NOW, THEREFORE, BE IT RESOLVED BY THE TOWN COUNCIL OF THE TOWN OF FALMOUTH, ASSEMBLED THIS 9TH DAY OF MARCH 2020, THAT:

The Falmouth Town Council does hereby agree to the following:

Resolution No 97-2020

1. The Town of Falmouth supports LD 2104, an Extended Producer Responsibility (EPR) for packaging law as endorsed by the Maine Legislature in 2019 through the passage of the Resolve, To Support Municipal Recycling Programs (LD 1431).

COUNCIL RESOLVE

Resolve, Calling Upon the Maine Legislature to Support an Extended Producer Responsibility for Packaging Law.

Whereas, Maine's communities are struggling to maintain, expand, and, in some cases, are eliminating recycling programs due to rising costs and difficult-to-manage materials; and

Whereas, product packaging, which includes plastic, metal, glass, and cardboard, constitutes approximately 30-40% of the materials managed by weight in Maine's municipal waste management programs; and

Whereas, Maine taxpayers currently unfairly bear 100% of the cost and pay an estimate \$16 million to \$17 million each year to finance the management of this material through fragmented and increasingly expensive disposal or recycling options; and

Whereas, producers of product packaging have little incentive to minimize wasteful packaging or increase access to recycling, and there is no organized coordination between the producers of packaging and the municipalities that are responsible for disposing of or recycling the packaging materials; and

Whereas, producers of product packaging have taken some or all of the responsibility for managing post-consumer packaging in other parts of the world, including all European Union member states and five provinces in Canada, and, as a result, have greatly increased recycling rates, expanded infrastructure investment, created jobs, and reduced taxpayer costs;

Now, Therefore, Be It Resolved,

The City Council of the City of Lewiston supports an Extended Producer Responsibility (EPR) for Packaging law as endorsed by the Legislature in 2019 through the passage of LD 1431, A Resolve To Support Municipal Recycling Programs. We believe that this policy will work to make recycling in Maine:

More effective. Producers of packaging materials would have a direct economic incentive to produce less-wasteful packaging that can easily and profitably be managed by municipal recycling programs. Having shared responsibility between those who create the waste and those who manage the waste would foster recycling system improvements and enable greater participation in recycling across Maine; and

More sustainable. An EPR law for packaging is an insurance policy for Maine municipalities when global recycling markets are unfavorable. The current approach to recycling is not resilient to fluctuations in the global recycling market. When commodity prices fall unexpectedly, towns and cities may be forced to stop or restrict their programs; and

More equitable: Maine's cities, towns, and taxpayers are currently footing the bill for a problem they didn't create. With recycling reform, taxpayers will no longer pay for the cost of recycling since the net costs of recycling would be reimbursed -- and the packaging manufacturers that produce less-wasteful, more recyclable packaging would pay less than those who do not. This is a much more equitable way to distribute costs.

Be It Further Resolved, that

The City Clerk shall provide copies of this Resolve to the Members of the Legislature's Committee on Environment and Natural Resources and the Lewiston Legislative Delegation.

Legislature's Joint Standing Committee
on Environment and Natural Resources

At their regularly scheduled meeting on Tuesday, May 04, 2021, the Pittsfield Town Council voted in the spirit of Extended Producer Responsibility (EPR) to support the concept of the EPR Packaging Law. The Town of Pittsfield encourages the Legislature to continue to work with the many stakeholders involved to develop and enhance LD 1541 "An Act to Support and Improve Municipal Recycling Programs and Save Taxpayer Money."

We understand that it is not an easy process to bring everyone together and commend you for your efforts to support and improve municipal recycling. We are very proud of our comprehensive recycling program and our ability to assist our neighbors through our regional recycling efforts.

Respectfully yours,

Kathryn Ruth

**RESOLUTION 19-001
TO SUPPORT MUNICIPAL RECYCLING PROGRAMS [LD1431]**

WHEREAS, Maine's communities are struggling to maintain, expand, and in some cases are eliminating, recycling programs due to rising costs and difficult-to-manage materials; and,

WHEREAS product packaging, which includes plastic, metal, glass, and cardboard, constitutes approximately 30-40% of the materials managed by weight in Maine's municipal waste management programs; and,

WHEREAS Maine taxpayers currently unfairly bear 100% of the cost and pay an estimated \$16 million to \$17 million each year to finance the management of this material through fragmented and increasingly expensive disposal or recycling options; and,

WHEREAS producers of product packaging have little incentive to minimize wasteful packaging or increase access to recycling; and there is no organized coordination between the producers of packaging and municipalities that are responsible for disposing of or recycling the packaging materials; and,

WHEREAS producers of product packaging have taken some or all responsibility for the management of post-consumer packaging in other parts of the world, including all European Union member states and five provinces in Canada, and, as a result, have greatly increased recycling rates, expanded infrastructure investment, created jobs, and reduced taxpayer costs.

NOW, THEREFORE BE IT RESOLVED, We, the Town of Scarborough, Maine, supports an Extended Producer Responsibility (EPR) for Packaging law as endorsed by the Legislature in 2019 through the passage of the Resolve, To Support Municipal Recycling Programs (LD 1431). We believe that this policy will work to make recycling in Maine:

More effective: Producers of packaging materials would have a direct economic incentive to produce less-wasteful packaging that can easily and profitably be managed by municipal recycling programs. Having shared responsibility between those who create the waste and those who manage the waste would foster recycling system improvements and enable greater participation in recycling across Maine; and,

More sustainable: An EPR law for packaging is an insurance policy for Maine municipalities when global recycling markets are unfavorable. The current approach to recycling is not resilient to fluctuations in the global recycling market. When commodity prices fall unexpectedly, towns and cities may be forced stop or restrict their programs; and,

More equitable: Maine's cities, towns, and taxpayers are currently footing the bill for a problem they didn't create. With recycling reform, taxpayers will no longer pay for the cost of recycling since the net costs of recycling would be reimbursed and the packaging manufacturers that produce less wasteful, more recyclable packaging would pay less than those who do not. This is a much more equitable way to distribute costs.

Signed and dated this 6th day of November, 2019, on behalf of the Scarborough Town Council and the Town Manager of Scarborough, Maine.

**IN CITY COUNCIL
RESOLVE #9-19/20**

WHEREAS, Maine’s communities are struggling to maintain, expand, and in some cases are eliminating, recycling programs due to rising costs and difficult-to-manage materials; and

WHEREAS, product packaging, which includes plastic, metal, glass, and cardboard, constitutes approximately 30-40% of the materials managed by weight in Maine’s municipal waste management programs; and

WHEREAS, Maine taxpayers currently unfairly bear 100% of the cost and pay an estimated \$16 to \$17 million each year to finance the management of this material through fragmented and increasingly expensive disposal or recycling options; and

WHEREAS, producers of product packaging have little incentive to minimize wasteful packaging or increase access to recycling; and there is no organized coordination between the producers of packaging and municipalities that are responsible for disposing of or recycling the packaging materials; and

WHEREAS, producers of product packaging have taken some or all responsibility for the management of post-consumer packaging in other parts of the world, including all European Union member states and five provinces, and as a result, have greatly increased recycling rates, expanded infrastructure investment, created jobs, and reduced taxpayer costs; and

WHEREAS, changes in the global recycling markets affected the local waste stream and directly impacted South Portland through more stringent restrictions on clean recycling loads and subsequent contamination fees; and

WHEREAS, South Portland has demonstrated leadership in waste reduction programs, policies, and practices through the Polystyrene Ban and Plastic Bag Fee, the state’s first citywide food waste recycling program, and a cross-jurisdictional recycling internship program; and

WHEREAS, South Portland remains committed to providing waste reduction and recycling services combined with robust, citywide outreach and education campaigns to foster a better understanding in the community of how to recycle properly; and

WHEREAS, South Portland has a goal to increase the City's recycling rate to 40% by 2020 through purposeful purchasing, reuse, recycling, and composting and will outline actions to minimize waste by changing how our community consumes and disposes goods and materials in the *One Climate Future* plan;

Now, Therefore Be It Resolved, We, the City of South Portland, support an Extended Producer Responsibility (EPR) for Packaging law as endorsed by the Legislature in 2019 through the passage of the Resolve, To Support Municipal Recycling Programs (LD 1431). We believe that this policy will work to make recycling in Maine:

More effective: Producers of packaging materials would have a direct economic incentive to produce less-wasteful packaging that can easily and profitably be managed by municipal recycling programs. Having shared responsibility between those who create the waste and those who manage the waste would foster recycling system improvements and enable greater participation in recycling across Maine;

More sustainable: An EPR law for packaging is an insurance policy for Maine municipalities when global recycling markets are unfavorable. The current approach to recycling is not resilient to fluctuations in the global recycling market. When commodity prices fall unexpectedly, towns and cities may be forced to stop or restrict their programs; and

More equitable: Maine's cities, towns, and taxpayers are currently footing the bill for a problem they didn't create. With recycling reform, taxpayers will no longer pay for the cost of recycling since the net costs of recycling would be reimbursed- and the packaging manufacturers that produce less-wasteful, more recyclable packaging would pay less than those who do not. This is a much more equitable way to distribute costs.

TRUE AND ATTESTED

TOWN CLERK

RECYCLING REFORM FOR MAINE

More Effective • More Sustainable • More Equitable

Letter of Support from Businesses for an Extended Producer Responsibility for Packaging Law as described in LD 1541

Maine's economy depends on a clean and healthy environment. Every year, our reputation as an eco-friendly state with spectacular outdoor spaces draws thousands of families of tourists. Visitors pump millions of dollars into our local businesses and generate significant tax income. Increasingly, customers are demanding products that are not over-packaged, and Mainers demand effective recycling programs.

Maine's local businesses, residents, and tourists all want to do the right thing to protect Maine's environment, but unfortunately the serious problems facing our waste and recycling systems are making that more challenging than it should be.

Maine's taxpayer-funded municipal recycling programs have been struggling to survive since 2017. Today, recycling costs Maine taxpayers an average of 67% more per ton than trash disposal. As a result, cutbacks and closures to municipal recycling programs have occurred throughout Maine as property taxpayers are being asked to pay more.

There is no indication that things will get better unless the Maine Legislature acts to reform recycling. Maine needs to adopt a proven solution known as Extended Producer Responsibility for Packaging (EPR) that is already used in 47 countries and provinces around the world. Because EPR has been so successful in those places, many states are now working to bring the policy to the U.S.

As local businesses who care about environmental stewardship and the future of Maine, we are joining Maine's municipalities in urging the Maine Legislature to adopt an Extended Producer Responsibility for Packaging law, as described by LD 1541, as soon as possible.

EPR works because it rewards businesses that have prioritized waste reduction and levels the playing field by holding big corporations accountable for the packaging waste they send to Maine. It also creates a more sustainable funding mechanism for local recycling that will reduce the burden on Maine taxpayers.

EPR is a more fair, effective, and sustainable solution for improving recycling that will help support our economy and preserve Maine's image as an environmental leader.

RECYCLING REFORM FOR MAINE

More Effective • More Sustainable • More Equitable

Dear lawmaker,

Our communities are struggling to fund and manage robust and resilient recycling programs. As a result, Maine has yet to reach the goal of recycling 50% of our waste that was established by law 30 years ago. I urge you to support recycling reform to preserve and expand opportunities to recycle in order to help towns save money and conserve our finite natural resources.

Luckily an effective solution to our recycling problems is available. Maine must move quickly to adopt an Extended Producer Responsibility (EPR) for Packaging Materials law so that our towns and taxpayers are no longer unfairly forced to shoulder the burden of managing and paying for recycling programs. The responsibilities of recycling need to be shared with the producers of the packaging who are currently profiting off of having us foot the bill.

EPR for packaging is already effectively used across the world, including in Australia, Brazil, and Canada, all 28 countries in the EU, and Russia. These systems successfully shift costs of managing recycling from taxpayers to the producers of packaging materials and increase recycling rates to well over 50%, which is an important way to save our finite natural resources.

Recycling reform in Maine will make recycling:

- **More Effective:** Producers of packaging materials would have a direct economic incentive to produce packaging that can easily and profitably be managed by municipal recycling programs. And my community would have an economic incentive to maintain a robust recycling program that no longer creates a tax-burden.
- **More Sustainable:** Our current approach to recycling is not resilient to changes in the global recycling market. Because my community must budget for recycling, when costs rise unexpectedly we may be forced stop or restrict our program. This would be an insurance policy for Maine municipalities when global recycling markets fluctuate.
- **More Equitable:** Maine's cities, towns, and taxpayers currently pay \$16-\$17.5 million per year to manage packaging waste. Meanwhile, more and more disposable and wasteful packaging is entering the market every day because producers have no incentive to design less wasteful packaging. This leaves me, the taxpayer, unfairly footing the bill for a problem I didn't create.

For these reasons, 2253 Mainers urge you to support Maine's municipal recycling programs by passing the extended producer responsibility for packaging law being proposed by LD 1541: An Act To Support and Improve Municipal Recycling Programs and Save Taxpayer Money.

Comment: I was very concerned/upset when Auburn decided to only pick up recyclables every two weeks instead of one; but I get it. I even have my doubts as to whether or not this single stream system even works! When I took my green buckets out a shade too late for the pick up - the trash collectors who followed behind offered to throw it out for me! They were being thoughtful - I know - but I go to great lengths to collect it so I told them thanks but no thanks - I recycle it in another 2 weeks. I have noticed that only one other house on my street recycles!!! The City should 'encourage' it - dare I say MANDATE IT! Landlords should require their Tenants to comply! I just heard that the City of Burlington, VT is soon to require household composting! Yet we throw away millions of pounds of plastic! I was recently staying at a Marriott Hotel in LI NY - where they recycle NOTHING!! I made my

feeling know but ...! If recycling is not incentivized - then it must be mandated.

Comment: With the global market for recyclables having collapsed, Maine needs to seize this moment and adopt more modernized, efficient, and sensible recycling policies at the state level. Maine companies need a financial incentive to source less wasteful packaging, and residents deserve better recycling options than having to pay for it and/or drive miles away from their house to a recycling center with very limited hours. Finally, at a time when tens of millions of Americans are unemployed and many jobs are being eliminated, recycling reform represents a jobs creation opportunity. I look forward to supporting legislation, policymakers, and advocates who push innovative and common sense solutions for recycling in Maine.

Comment: Recycling needs to be going upward in amount recycled not down. Less in landfills, more reuse.

Sarah Dennison

Bangor, Maine

Comment: We have a duty to preserve the health of our ecosystems for future generations, and that includes reducing waste. It is imperative that we improve our recycling systems so they are functional, because right now they are nowhere near what they need to be. We need manufacturers to take more responsibility for the products that they put on the market and where they will end up. Conscientious consumers are already doing everything they can to recycle, but the system is not strong enough. We need the ability to recycle more products, meaning companies need to be held responsible for manufacturing products that fit within the recycling system. Companies also must pay into the system that handles the waste they create and it should be considered simply another business expense. NRCM's recycling reform suggestions are mirroring what has worked very well in other countries, and we should follow their lead for a cleaner future.

Miriam Devlin

Bangor, Maine

Comment: We must take individual responsibility for all recycling, including those who produce the materials used for packing. This is no longer an either/or option. Where there are rights, there are also responsibilities.

Mary Downing-Minctons

Comment: Please, let's support recycling improvement now! The pandemic has created a serious problem in many ways personal and commercial. But besides that I often feel frustrated daily by the new product packaging that doesn't fit the description for what can be recycled. The craft beer industry for example does not carry the usual 5 or 10 cent recycling 'tag'. Why?

Dozier Bell
Bath, Maine

Comment: Shared responsibility for the sea of packaging materials we generate and use is the only sensible way to proceed. Producers must have incentives to market easily recyclable materials, and towns must not continue to be burdened with producers' refusal to do so.

Will Blake
Bath, Maine

Fred Cichocki
Bath, Maine

Comment: All 'plastics', but especially packaging materials, should be both down- and upcyclable to the limit of molecular stability (at which point, additional considerations are warranted). This should be strictly enforced, to the extent that no new virgin plastics are allowed to be produced until all existing material is fully reprocessed according to its future utility (up to the molecular limit) and re-enters the stream (and so forth into the future.) I'd go even further. If nothing else,

the rate of production of goods that require special packaging should be limited by the rate of recycle of available packaging materials themselves. If this seems draconian, it should. Only by confronting the sacrosanct (but flawed) economics of modern production & consumption, and taking such extreme measures, can we possibly solve the 'plastics problem'. In the ecology of Nature, on the other hand, such 'measures' are the way it's always been. It's high time for us to go 'back to the future'.

Carey Donovan

Bernard, Maine

Comment: Reduce is the top of the waste hierarchy in Maine, yet over the years waste has only continued to increase. This bill would reduce packaging and reduce the amount of waste that municipalities have to dispose of. It would incentivize corporations to provide packaging that is non-toxic and that is readily recyclable. It would also bring money back to the towns to support their recycling programs and waste management program. This legislation would benefit the environment (less toxins), reduce waste, and provide financial support to the towns.

Comment: I recently bought a little bottle of NAIL POLISH from Amazon. It was in a tightly sealed glass bottle, INSIDE A ZIP LOCK TYPE PLASTIC BAG,...INSIDE A DOUBLE WALLED, PADDED, PLASTIC ENVELOPE ABOUT 14 X 16 INCHES big!!! Isn't that ridiculous? And that plastic packaging has to go somewhere, where it will be FOREVER! I cannot find an address for Amazon or I would start a customer rebellion by mail or e-mail. I am signing this petition because somehow we need to let the companies know that they need to think small, biodegradable, in terms of packaging. I care about this! However, I don't completely understand this petition, but if it starts the conversation, I am all for it.

Katherine Reddoch

Bethel, Maine

Sarah Southam

Bethel, Maine

Comment: I have been working on ways to reduce plastic in my life, but the wasteful packaging is what is most frustrating to me because I don't have the ability to change that infrastructure. I think the companies who are shipping products to consumers need to come up with a way for us to either return the packaging material or reuse/recycle the material again in our local communities. It should not just be going into landfills. This is totally irresponsible on all our parts.

Comment: We absolutely need manufacturers to use only recyclable plastic in their packaging... it seems that more and more packaging is being used. As a consumer it is always a relief to see that e.g a plastic cup is made of plant based material. It is not like we cannot produce this kind of plastic. Education is also crucial. Even with the best will, it is hard to know exactly what can be recycled and when biodegradable items should be put in the recycling rather than going to the landfill.

Marianne Schuman

Cape Elizabeth, Maine

Comment: As a grandmother to 3 young children and a baby on its way, I have grave concerns about the state of the

environment. We need to rethink how we do everything. Changing packaging is an excellent, long overdue way to begin. Companies have been slowly responding and will respond more rapidly with legislative pressure from the states. The car companies now follow California's emission and mileage standards. It CAN happen. Thank you for spearheading.

Comment: To effectively protect our environment, to make a significant positive impact, change must be done legislatively, rather than by individual choice. We must work towards eliminating single use materials, especially plastics, which municipalities are collecting in large amounts but for which they find fewer and fewer recycling opportunities. Consumers and municipalities currently have no power to reduce the manufacturing use of pollutant materials and therefore are stuck with the cost burden. Ultimately, without legislative change, our environment and atmosphere are being degraded. The bottom line is that if a packaging material cannot be recycled or cleanly burned it must not be manufactured. We have the science and NRC of Maine is providing the vehicle for us to be more responsible stewards of our planet. I support them in this crucial endeavor. I hope you will too.

Comment: Yes, I have been trying to make this point for over 40 years. Consumers have little choice as what to do with the packaging from products that they buy. Though I tend to buy in bulk at a health food store, many buy from large grocery chains. Therefore this is a great opportunity to help pay for the cost of recycling. I hope more entrepreneurs move forward on using the cardboard, glass, etc to turn into other usable products. Also credits for plastic polymers (like carbon credits) may move plastic recycling into a better place.

Roberta Atkinson
Damariscotta, Maine

Comment: An overwhelming problem which must be solved now! Everyone is responsible for the situation we are in.

Bill Bausch
Damariscotta, Maine

Comment: This is a great first step to correct the current situation of packaging that defies recycling. If we consumers and taxpayers insist on changes and use our purchasing choices to put pressure on manufacturers and distributors to move in an environmentally responsible direction, things will happen.

Sean Fleming
Damariscotta, Maine

Fairfield, Maine

Elizabeth Lykling
Fairfield, Maine

Sally Melcher-McKeagney
Fairfield, Maine

Comment: Because our beloved planet has a finite number of resources, and because being wasteful is something our parents and grandparents would scold us about, if they only knew, we need to expand, not lessen, our recycling efforts. A dear friend of mine, in her 80s, tells a story about her mother, who, upon seeing all the extra store packaging for individual items said, 'We will be buried by our trash!' And that is coming true now. We must stop it.

Lyn Rowden
Fairfield, Maine

Comment: Get these product makers to make packaging that is easily recycled. Cut out so much waste esp in uge plastic containers for a minute amount of pills, the heavy plastic coverings on items that don't even need packages and make it so we can use our own reusable jars and bottles in the grocery stores. Thank you

Paul Wheelock
Fairfield, Maine

Comment: Let's take action which demands that those packaging of goods implement packaging practice that reduce & minimize the packaging material used. For example, breakfast cereal box that are 2/3 filled be reduced in size. If 'settling' is the real issue then the settling of the product out to be done while packaging, mathematically calculating the anticipated size change. None of this is rocket science and the industry know how to do this.

Catherine Chamberlain
Falmouth, Maine

Comment: Plastic containers contribute to so much waste. It's time to rethink over packaging.

Debra Coyman
Falmouth, Maine

Comment: I have believed for years that the manufacturers who design packaging should bear the responsibility for the aftermath, whether it turns to trash or is reusable/recyclable. Communities and their taxpayers should not have to bear the end result of non-sustainable and wasteful packaging choices. Recent changes in the market for recyclables have put additional pressure on municipalities, with likely negative results for the environment. I believe lawmakers should support extended producer responsibility for packaging in Maine.

Jennifer Cummings
Falmouth, Maine

Comment: Please help prevent wasteful packaging which will keep our environment clean. Reformed recycling will help reduce the burden on taxpayers.

Arthur Benson

Hampden, Maine

Kelsey Conley

Hampden, Maine

Comment: Our current recycling infrastructure is weak, it is entirely vulnerable to market value and thus puts an insane cost of \$16-17.5 million per year onto Maine taxpayers. This means that Maine consumers are bearing the burden twice over, they are buy the products and then paying for the end of life care of the packaging they came in. With market value for recyclable materials falling, Maine municipalities have been forced to decide between raising taxes or cutting recycling programs. Adopting an EPR for packaging bill would increase the accessibility of recycling to Mainers, strengthen the infrastructure of Maine's recycling programs, incentivize companies to establish more eco-friendly packaging, and divert waste from our landfills and incinerators, all without increasing the burden of cost on Mainers. EPR is the way of the world because it just makes sense and it is time for Maine to catch up.

Stephen Estes

Hampden, Maine

Comment: Long over due!!

Wally Jakubas

Hampden, Maine

Comment: All of the plastic we use for packaging should either be recyclable or biodegradable.

William Lippincott

Hampden, Maine

Comment: We need to reverse the trend of towns eliminating their recycling programs; it makes sense to address the source of the problem rather than put the burden on town's budgets.

PLEASE work on solutions to make corporations share in the cost of delivering recycling programs. PLEASE pass an 'extended producer responsibility for packaging' law.

Tom Berry
Kennebunk, Maine

Comment: For both environmental protection and economic reasons, we need to be able to effectively, efficiently, and economically recycle as much human-made material as possible. For far too long, companies have been able to create packaging and other materials that are difficult or impossible to recycle. The obvious result has been that they have never borne any part of the burden of paying for disposal of those materials once they have been used by the consumers who bought them from those same companies. They have, instead, gotten off 'scot-free'. Common sense of fairness demands that this must change.

Mary Beth Brown
Kennebunk, Maine

Comment: What fantastic news! Sensible and sorely needed! We will never be able to keep up with the waste we're currently producing - both in terms of kind (plastics/synthetics) as well as the levels its currently being produced. And there's no excuse for not reaping the benefits of food waste - which is so easily converted into compost. Best is to make producers - those profiting from production - take responsibility for their product's end-game ala cradle-to-grave design/planning. in the future to obtain any patent, the plan for that products eventual disposal should be a required criteria. Thanks for moving forward on this!~.

Patricia Lynn Eldershaw
Mapleton, Maine
Comment: Aroostook County has a poor track record with recycling and recently has cut back on accepting for recycling glass and several commonly used plastic items. Less than 10% of plastics are recycled and most end up in landfills, are incinerated or discarded. More than 1/2 of these plastics are single use items. I have written to local retailers to request stopping single use plastic shopping bags but have been declined despite numerous studies demonstrating they can spread the virus and live on surfaces up to 3 days. Plastics are enormous environmental and wildlife threat. The European union has voted to ban single use plastic items and put in place 'polluter pays' measures to pressure manufactures to develop alternate or zero packaging. There are sustainable alternatives. We just need to have the will to use them.

Mark Brown

Comment: Yes, first, pressure on manufacturers of food and care products to only send bio-degradable packaging to Maine.

Then, we need innovative ways to reuse the products we already have in the State encase them in insulation or concrete in some ways that would render them inert (if that's possible micro plastic particles rained down onto Colorado, recently). Maine certainly does not want more plastics in the oceans to harm our seafood, we already have too much. This evidence is not hard to find. Maine should immediately become a leader in this effort!!!

Suzanne Hedrick

Nobleboro, Maine

Comment: I have been recycling and composting for years. I intend to keep doing so

Carol Knapp

Comment: It is time to make the producers of the products we use become more responsible in their packaging.. Europe is way ahead of us in what they can and do recycle. Our efforts to make a huge difference in the waste stream hinge on significantly better recyclable packaging. Help us help the planet, save resources and the environment. Thanks.

Polly Grindle

North Yarmouth, Maine

Comment: For years I have been a vigilant recycler, checking for the chasing arrows and numbers imprinted on plastic and washing it all very thoroughly. I have used cloth bags for years. I buy dairy products from a local dairy and return the glass bottles to them. I reduced my trash as much as possible and had a much larger volume of clean recyclables. Then I kept reading about how much stuff was not recycled, but instead was foisted on poor countries and ended up polluting their lands and the ocean. Styrofoam is something I try very hard to avoid and it's almost an impossibility to do so when purchasing meat. I am old enough to remember when waxed paper, butcher paper and paper meat trays were used instead of plastics. Our family of seven had far less trash in the 1950's than my family of three has today. I am so tired of all the plastic wrapping to fight my way through just to get to the product. I do not want all this plastic waste and I feel guilty about my contribution to it.

Martha Leggat

Kristin Cleary
Ogunquit, Maine

John Fusco
Ogunquit, Maine

Comment: As manager of the transfer station in Ogunquit I am at the bottom of the waste stream and I know how disturbed this community is by the changes in the waste industry. The citizens and businesses of this town have always done their part to recycle and it seems unfair that the increased costs are bottom weighted to the towns. It seems only fair that those who create the unavoidable packaging/waste should pay a portion of the cost to dispose of it.

Robin Millward
Ogunquit, Maine
Comment: In the town where I live, paper is no longer

recycled and only plastics marked 1 or 2 which have a screwtop or are a jug are accepted. I specifically chose my calcium pills because the packaging seemed to be compliant but the empty bottle was rejected because it was green translucent plastic even though it was marked 2 and had a screw top. It's really frustrating to be contributing to the land fill against my better judgement!

Theresa Neill
Ogunquit, Maine

Jake Roche
Ogunquit, Maine

Comment: Sad that we can no longer recycle plastic #5 anymore, or paper, in Ogunquit. As a state, we should be getting better at recycling, not going backwards.

Vanessa Berry

Old Orchard Beach, Maine

Comment: Producers should share responsibility for funding the end-of-life of packaging they bring into the Maine market. Please support legislation that reduces the strain on Maine's municipalities to fund the disposal of packaging and promotes better use of the current recycling systems in place to meet its recycling goals. Maine has the opportunity to show its strength and lead the way for the rest of the country as we encourage the use of better alternatives and prevent our children from dealing with more landfills.

Andrea Farrow

Old Orchard Beach, Maine

Brendan Fahey

Old Town, Maine

Comment: I agree with this effort. We are encouraged to recycle, but many products we buy are packaged in plastics, etc that are not recyclable. This is wrong and the

manufacturer should be obligated to use packaging product that can be recycled. Manufacturers have misled consumers for long time with recycle symbols and small statements on their packaging saying the packaging was made with 10% recycled materials (only 10%), but the packaging material itself can not be recycled. I know most consumers are unaware that they are buying products with packaging that can not be recycled. We need to change that mindset. More importantly, we need to force the manufacturer to use packaging that will be 100% recyclable. Thank you for your time.

Adinah Barnett

Portland, Maine

Comment: I have been a Portland, Maine resident for over 25 years. Way back in the mid 90's I started saving my recyclables, sorting them, and taking them to the 'silver bullet' recycling containers that used to be on Marginal Way. I did this for years while being a single mother of two, working, and being active in my community because I believe in being conscious of our waste and diverting the waste stream whenever possible by avoiding purchase, reusing, and recycling. Then, when Portland began curbside recycling I participated by sorting my recyclables---then several years ago they changed to 'don't bother sorting'...hmmm...mysterious. Was it going in the incinerator? We wondered. All this to say, Americans, Portlanders, are smart and resourceful enough to get serious about our waste. Look at what that city in Taiwan does--citizens bring all trash and recyclables out to meet the truck and put everything in the proper bins...it can be done! We need to be far far less focused on convenience!

Adinah Barnett

Portland, Maine

Comment: Many of us have recycled for decades, including before there was curbside recycling and we had to separate our recyclables and drive them to the 'silver bullet' bins miles away. People are willing to do what they can (so long as it makes sense and isn't ridiculously confusing, ie: items having the number and recycling symbol on the bottom, but not being taken locally in certain sizes, etc). But this is obviously not enough, or we we wouldn't continue to have the problem we do of never even inching forward to meet our community

recycling goals. Please, please, please, follow the lead of the European Union and many provinces of Canada and make the producer of the packaging cover costs of recycling the object. This will undoubtedly push them forward on innovative, sustainable packaging design and give people good paying jobs with an eco-minded outlook. More people will be able to work on the field of recycling and reuse. Plus, it will cut costs and clean up the environment, all big wins!

Comment: I support this effort because the rate at which we are producing garbage is untenable for life on earth. Really we ought to stop producing this stuff to begin with, because while wonderful, recycling alone is not enough. We need to start thinking less of ourselves as humans and remember that there are other species that have to contend with the messes we make. Sincerely, Molana Oei

Nancy Olmstead

Portland, Maine

Erik Osborn

Portland, Maine

Comment: ERP is common-sense environmental economics. With the current system, manufactures have no direct incentive to maximize the recyclability of their packaging. Maine communities pay the cost, and manufacturers who

choose not to improve their packaging get a free ride. EPR pushes the responsibility back to the manufacturer, who is the one who actually has the power to change their practices and lower environmental and economic costs for us all.

Jill Osgood

Portland, Maine

Susan Pastore

Portland, Maine

Comment: It distresses me that although the administration in the 'senior' housing where I live has a recycle dumpster and that almost all that goes into this dumpster is 'black bagged' which means it is destined for land fill. I am able to carry my trash to the dumpster un-bagged but most here rely on maintenance to do the right thing. I was able to persuade administration to initiate 'Garbage to Garden' which works well in dining room and kitchen...the Bistro is not as successful. Thank you for all you do, Sue

Comment: Reduction of refuse must start at the source. We as a world must acknowledge that the great convenience (sometimes not!) of currently used materials has a downside that is not what we want for our world. We must start making our wishes known and support legislation that restricts use of such materials. And endorse programs that require manufacturers and packagers to redeem and effectively recycle materials as appropriate.

Barbara Rachel

Portland, Maine

Comment: It is not enough to dutifully crush our cardboard etc, it's necessary to reduce packaging. At what price convenience? The destruction of a planet? Thanks Barbara Rachel

Comment: This is an absolute imperative!! Covid 19 hit and the influx of out of staters with second homes in Maine hit our transfer stations like a Coronacane.. the WASTE is outrageous, the system incredibly frustrating, and terribly, terribly sad. Nobody cares because there is no money in it. The problem is on the FRONT end with corporations and manufacturers, I have ALWAYS said this. (My dad is a retired materials reduction engineer.) Imagine the money THEY could save if they never created this waste in the first place!! There is absolutely NO plan for the exit/deposit end of product life. Our Ocean beach sand the world over scientists say contains over 70% plastic micro-beads! Everything IS connected. I want to cry when I make my once a month (skimpy) trip to the station with my recyclables, at what I see being dumped there at OUR expense!!

Comment: I collect my recyclables and take them to the town 'dump', as I live in a trailer park which does not collect recyclables. I have tried to talk them into it, but they say 'no way'; I'm sure our park rent would go up too. I realized yesterday that I should have done more, when I was on a trip with two others. We had ice cream. The plastic containers, after being empty, were put in a bag for trash. I asked for it, to recycle the plastic. The leader of the group laughed and said it's too much bother to wash them. (I do wonder if the use of water outweighs the saving them to recycle.) Speaking of water, as we left the restaurant, I looked at my half drunk glass of water...they won't give you a half a glass...and asked if they needed water in their water bottles. No, they had bought bottled water for the trip. This is prevalent. It makes me sick to know that water goes down the drain. My thermos was full. They laughed when I said how many people have NO water. They wouldn't get this was...

Marilyn King

Sanford, Maine

Comment: All through the pandemic I have ordered all household goods on line. I have noticed that some businesses are trying to reduce packaging waste, but we still have a long way to go. Scarborough, Maine
Comment: We are avid recyclers yet still find what can and what can not be recycled confusing. Also this goes here and that goes there, which discourage busy families from recycling more - we go one place for food scraps, one place for yard waste & and metal, wood, other and another place for large cardboard - plus we separate garbage from recycled

materials for curb pick-up. We are retired so have more time to do all this, but working folks & families may not. We need to make recycling easier. We need to lessen what we waste/need to recycle in the first place.

Comment: Recycling is extremely important to me! I have been actively and regularly recycling since the mid-1990s. I believe it's not only vital to our community and planet to recycle, but, it's also the right thing to do! As a consumer, I feel it's extremely important to know what can and cannot be recycled. I find that a fair share of the healthy products I regularly use do not have clear recycling guidelines, which requires me to leave them out of recycling and send them off to the dump via my weekly local curbside pick-up. Ideally, it would be wonderful if all 50 states would be part of a larger movement for enforcing all food companies to market products that are packaged and sold in recyclable packaging. In addition, food waste needs to be removed from plastic trash bags and placed into renewable composting programs...it does not decompose, only creates gases. I ask that you please be proactive and a contributing part of recycling in our treasured state of Maine! Thank you. :)

Debra McDonough
Scarborough, Maine

Comment: A great way to incentivize more recyclable packaging. Thanks for leading this initiative.

Mara McDonough
Scarborough, Maine

Jane Palmer
Scarborough, Maine

Comment: Recycling -- and RECYCLABLE PACKAGING -- are absolutely essential for our quality of life now and for the future condition of the planet that we are leaving for our children and grandchildren. In order for decent living conditions in years to come, recycling in Maine must be reformed, upgraded, and extended. An 'extended producer responsibility for packaging' law is a necessary part of the picture of ensuring that Mainers of the future are not left to drown in garbage, especially plastic garbage that increases global warming as it deteriorates. This must be a priority!

Elliot Robinson
Scarborough, Maine

Comment: We need legislation to curb waste, especially plastic waste. It still comes down to individual effort to make it work. People need to make their recycle waste as clean and useful as possible and avoid buying more junk to throw away wherever possible. Just take coffee cups as a for instance, having your reusable cup refilled each time you stop for coffee would certainly help. There is no shortage of things we didn't waste in years gone by. The idea that it's always cheaper to buy a new, throw away jug than to wash out the old one is something that has been invented in my lifetime. I will be 80 Friday and I really think we are living in a crazy time. Waste is the way we go.... 'use it up, wear it out, make it do or do with out'.... words we lived by. credit to: Don Grooms.....

Greg Soutiea

Spruce Head, Maine

Comment: As a small business owner of the Caignair Inn and Restaurant (22 rooms and 54 seat restaurant) I support this reform.

Shane Eherts

Standish, Maine

Carmen Gauthier

Starks, Maine

Comment: The recycling program in Starks is a bad joke. And it costs us as property tax payers more each year and they are accepting less items to recycle. What Joe Hayden doesn't accept for recycling I take to Farmington United Way to recycle. And since when can a town selectman get paid with tax payers' money to perform recycling in the town? Isn't that unethical at least and illegal at most?

Elizabeth Smedberg

Starks, Maine

Comment: Recycle!

Donald Parker

Steep Falls, Maine

Comment: I strongly support recycling; it makes sense!

Georgianna Kosciusko

Stetson, Maine

Comment: It is time that recycling Reform for Maine is available!

Jeff Beckley

Steuben, Maine

Comment: Packaging is such a HUGE problem in the way it litters our planet, depletes hard to replace resources, harms wildlife, poisons the air and water we need to live healthy lives. So much of it is unnecessary and wasteful, and even when it is needed there are healthier alternatives. It way past time to create incentives (or disincentives) to move in the right direction to limit the negative impacts of packaging. This bill will help address the problem at it's source. Yeah!!!

Maddrey Coover

Steuben, Maine

Comment: We lost our town's recycling last year. It is very sad to send so much plastic to waste now.

Katherine Doble

Steuben, Maine

Peggy Drake

Comment: Recycling reform is long overdue. Why are we filling up our landfills with material that should be recycled? Why do we drill for oil, mine for ores, etc. then manufacture plastic products (made from oil) and metals (we mined for) and then throw them away in a landfill. Then we go and drill for more oil and mine for more metal...putting the environment at great risk. It is absolute insanity! This EPR for packaging bill must go through!

Isabelle Rogers

Vienna, Maine

Meghan Willing

Vienna, Maine

Stephen Bara

Waldo, Maine

Letitia Manning

Waldo, Maine

Comment: We need to improve our recycling programs and reduce the amount of throw-away packaging. There is trash all over the roads and beaches of Maine. Not only is it unsightly, harmful to the environment and a pain to clean up, it wastes all the resources that went into all that packaging. It also costs money to clean it up. Increase recycling and you will keep Maine cleaner, help protect our beautiful environment and save resources. In addition, we must force companies to reduce the amount of packaging, and to reengineer the type of packaging so that packaging is 'cradle to cradle'- it is designed to be used over and over, not single-use. There is nothing new about reduce, reuse and recycle, but now these actions are absolutely critical for a healthy future.

Tzevi Aho

Waldoboro, Maine

Krisanne Baker

Waldoboro, Maine

Comment: I can't begin to tell you how many people I know who are upset over the rescindment of plastics recycling numbers one through seven at our local transfer station. People in my town and so many others worldwide, have really been getting on board, finally, with plastic recycling; then there is none. Please bring it back somehow, someday. This planet is drowning in plastic. I'm hoping it will at least be recycled until a plant based packing alternative takes hold of the world instead of plastic.

Comment: We need not only to reduce our waste generation (which requires of a bigger effort from companies to offer more sustainable packaging alternatives), but also having accessible ways for effectively recycling our inorganic (and composting our organic) materials. In many cities and countries in the world, waste is seeing as a product with the potential to being processed and become profitable, creating energy, jobs and an industry itself. We shouldn't see our waste as the final outcome of our lifestyles but have a circular economy approach where only what can't be reduced, re-purposed or re-utilized find a final low-emission and resilient destination.

Michael Uhl

Walpole, Maine

Genda Bonde

Warren, Maine

Stacey Hall

Warren, Maine

Katherine Holland

Warren, Maine

Comment: Now that our transfer station is now accepting only #2 plastics, the amount of trash we create has increased by 25-50%. The main culprits are large containers for salads, fruits, yogurt, mayonnaise and peanut butter jars, electronics and personal products. Surely manufacturers should turn their attention to packaging their products in a more logical way. Without incentives like laws, however, they are not going to do so. Please do what you can legislatively to force producers to package their products in more ecologically sensitive and practical, economical ways. Thank you.

Claire Prontnicki

Waterville, Maine

Comment: I've been picking up plastic trash in my neighborhood, and it's definitely getting worse! Even when people try to recycle, the wind blows lightweight containers right out of recycling bins (and ultimately into the river, from there to poison sea life). And a lot of plastic isn't even recyclable, at least economically. Industries have to get motivated to make their packaging more environmentally sustainable.

Jonathan Rogers

Waterville, Maine

Anna Beth Rynders

Waterville, Maine

Comment: I recycle to the best of my ability, and will continue to do so. I'm concerned about 'contaminated' loads and feel that everyone needs better information on what can be put in recycle bins and what cannot so that the process is more efficient and less costly. I'm hoping to encourage my neighbors here in our 16-unit condo association to do more recycling and am trying to think of ways I can help them to do so. Right now only about 4-5 units put out a recycle bin. I feel strongly that it is important for all of us to keep recycling and to find ways to get more people to do it, and to keep it a viable alternative to wastefulness.

Elizabeth Schiller

Waterville, Maine

Ellyn Smith

Waterville, Maine

Comment: I hate, loathe, despise having to throw away items that I have been accustomed to recycling. I have even started purchasing different brands and items so I don't have to put glass in the garbage. In a disposable culture (juice boxes, Capri sun pouches, individually packaged EVERYTHING) recycle reform is absolutely necessary.

Comment: Recycling should be mandatory and the powers to be need to figure out how we are going to get it done! Makes me sick that there isn't more done as far as recycling goes.

Comment: It bothers me to think of all the waste I've made in my lifetime. All of us are contributing to mountains of waste but we can turn this around a great deal and, and I hope, eliminate most of this waste by changing how we think about and manage packaging. Extended producer responsibility for packaging is a huge step in the right direction. We need to be introducing people to this at the town level so we can start to turn things around.

Comment: We spend summers in Maine and have been impressed with the transfer station we use in Franklin County (and how the one my family used growing up has changed with the times). But there is a huge cost in money and health for the tremendous amount of packaging and non-reusable materials our country produces.

Joyce Bailey
Windham, Maine

Comment: Reducing packaging at the source makes common sense! I have travel to other countries where there is much less packaging, for the same products that we have in this country. Clearly, wasteful packaging is not needed.

Ryan Dorland
Windham, Maine

Comment: As a Maine homeowner, I am in favor of updating recycling programs even at the expense of increased tax burden on corporations and by extension the increased prices of manufactured goods. Often the producers and distributors of goods get off easy and aren't concerned about the downstream impacts of packaging choices. It is time to change that and impose more stringent requirements on packaging throughout the country and state.

Comment: Maine towns are struggling to afford their recycling. Towns need help!

Lorrie Marx-Adams
Windham, Maine
Comment: The TIME IS NOW for us to pull out all the stops to save our Earth home. This is a great way to motivate manufacturers to do the right thing for the environment. It is unacceptable for manufacturers to continue their use of packaging such as styrofoam. It is time for us to stop production and use of any material that cannot be recycled and reused. There are biodegradable alternatives. We must step up and ensure all materials that are not biodegradable can be recycled. We must educate and make it easy for consumers to recycle.

Comment: I've recycled materials since 1955. This effort only makes sense; if we have to buy things in packages let's have a producer led recycling initiative to help Maine get it done.

Meg Anzalone
Winslow, Maine
Comment: Please pass an extended producer responsibility for packaging law

Dan Camann
Winslow, Maine
Comment: Something has to be done to stop so much waste.

Peter Garrett
Winslow, Maine
Comment: Having manufacturers take responsibility for both their packaging and the recycling of the products they make is a no-brainer. We who purchase their products cannot be expected to figure out how to recycle mixed materials in one item. I understand that German law sets the standard for this kind of manufacturer's responsibility for end of useful life reuse of materials.

Sally Harwood
Winslow, Maine
Comment: Recycling is critical, and more so, reducing packaging at the source. Does a hammer really need a cardboard and plastic wrap?

Walter Keene
Winslow, Maine
Comment: I want us to recycle but I recently heard that it often costs more to recycle a product (such as plastic) than to make it from a raw material source (such as petroleum) so it doesn't work unless the government decides to put a fee on producing the product from the raw material source so that recycled products are competitive. Do you think it will be possible to do this? I do think we are using too much plastic. Elery Keene

Comment: Help ME stay beautiful. Make corporations contribute to recycling programs. Pass legislation now!

Jane Stork
Winterport, Maine

Darrah Wagner
Winterport, Maine
Comment: We generate a disproportionate amount of waste in this country due to excess and non-recyclable packaging. It doesn't have to be this way. If producers are required to pay something to enhance recycling there might be a reduction in non-recyclable packaging. Thank you Darrah Wagner
