LD 2261

I write to ask members to reject LD 2261.

This initiative is designed to further polarize and delay the work Mainers are trying to accomplish to meet a range of critical, Climate Oriented Carbon Emissions goals.

We have been working together through the existing process, and helping to keep the political temperatures down as the atmospheric temperatures are racing up faster than the predictions had dared to conclude. Please don't contribute to the Rancor that is doing so much damage to our national, political discourse today.

You have to be brave here. Maine has been lucky so far, as others hit more and more extreme droughts, hurricanes and tornadoes, wildfires, and all the infrastructure and personal costs that have been exploding around us as a result. Our flooding in recent weeks is just a taste, and the ski industry alone could give witness, while the gulf of Maine warms faster than most oceanic spots across the globe. Please join this fight- we have to work together without delay.
