

LD 101

It seems the whole purpose for the windmill farm is because of the belief that we have global warming. I recently listened to a Video by Prof William Happer, Professor of Physics Emeritus at Princeton University covering CO2 in the atmosphere. I would be very happy to share this information with the members of the committee. The plants and trees need CO2 without it they would die and our food supply would decline if not simply go away. I believe if you take the time to listen to his presentation You would see that the whole of the windmill farm is not necessary. The question now is will you take the time to listen. <https://robertdavidsteele.com/mirror-is-there-a-climate-crisis-the-science-says-not-now-and-not-in-the-future-william-happer/> I certainly pray that you will take the time to listen/

Thank you
