

Senator Lawrence, Representative Berry, Members of the Joint Standing Committee on Energy, Utilities, and Technology... I am writing as a Mainer, and as a commercial lobsterman asking for your support of LD 101. Maine certainly needs to make a push for alternative energy however I have deep concerns about the potential impact that any offshore wind project will have on the environment. These waters of the Gulf of Maine provide a corridor for migrating species such as birds, bats, fish and whales. Offshore wind projects will also have an impact on current fisheries such as groundfish, tuna, and lobster by displacing fishing grounds, obstructing navigating, and potentially impacting the behavior of targeted species. Thank you for your time and consideration.

Best,

Kris Koerber
