The Gulf of Maine is NOT an experimental ground!

1. Destroying miles of the ocean bottom and miles of the eco-system where life begins is NOT good for the environment.
2. Electromagnetic fields are NOT beneficial to marine life, let alone right whales.
3. The same environmental groups that are pushing fishermen to change practices to avoid potentially harming right whales are pushing for wind farms which will potentially harm right whales.
4. Fishermen, their families, heritage, livelihoods and the fishing communities and economies that depend on them will pay the price. Do not forget the trickle-down effect on all that depend on fishing. Seafood workers, food stores, fish markets, restaurants, consumers, bait dealers, truck drivers, fuel companies, marine mechanics, trap builders, the tourist industry.
4. Maine already has enough sustainable energy for the state. This energy is NOT needed in Maine.
5. Energy cost for wind is up to 6 times HIGHER than other sources with a guaranteed 2.5% increase every year for the 20 YEAR EXPERIMENT, after which the windfarm will be DISMANTLED.
6. Windfarm blades are NOT recyclable.
7. Follow the money trail to see just who benefits from this taxpayer funded project.
