We the People of Maine (and America) D NOT want these wind turbine in our oceans (or land) They are not environmentally friendly. Look at the waste they create when no longer in service. They are created with a composite fiberglass that does not break down and will remain in the ground (dumps) for ever. They leak oil which in turn creates more hazards for the environment.

Do what is needed to STOP these wind farms! We do not want our ocean,land, or lakes contaminated with these wind farms.
