I urge you to create the Green Bank as a vehicle for assisting essential improvements to Maine life and sustainability. The Accelerator will allow Maine to access millions of dollars of federal money for clean energy projects. The bill's provision that 40% of funding be directed to low income and/or communities of color is a major step in addressing systemic injustice that Maine has been blind to for far too long. You have an opportunity to move Maine to the foreground of efforts to fund economic growth that is also part of the solution to the climate crisis rather than contributing to that existential crisis' continual worsening. Seize the day!
