

LD1659

Chairman Berry, Chairman Lawrence & joint Energy, Utilities and Technology committee members:

It has been a century since our impact on global warming was discovered & over 15 years since Al Gore identified the “inconvenient truth” about it, yet global emissions of greenhouse gases continue to rise , Governments still subsidize fossil fuels & citizens pay for renewable energy on their own. It isn't surprising that people such as the Fridays for future movement led by Greta Thunberg & students born in this century are upset with my generation's failure to stand up to international commerce , stop increasing greenhouse gas emissions & “clean up our mess”.

Humankind should atone to future generations for its failure replace misguided fossil fuel subsidies & accelerate the transition to renewable energy. The sun provides enough energy to Earth in one hour to meet all earth needs for a year. We only need to capture that energy to have energy without greenhouse gases. A bill called Accelerator LD1659 would finance renewable clean energy projects. In the past 5 years I have saved over \$1.8K per year on electricity generated by my 36 solar panels costing ~\$32K in 2016 - but people often dont have enough cash to pay that. An Accelerator like LD1659 could loan initial solar panel costs - then be reimbursed over time with savings from energy credits - so homeowners can reduce emissions . It would also finance other types of projects that reduce or eliminate greenhouse gas emissions.

Please vote yes “ought to pass” on LD1659...

Swedish Climate activist Greta Thunberg once said: “We are failing but we have not yet failed. The future is up to us.”
