

LD1708

Chairman Berry, Chairman Lawrence & members of the Energy, Utilities, & Technology Committee,

Please vote yes ought to pass on a Bill to create a customer owned public utility committee with correct language to meet legal needs - LD1708 - patterned after the successful customer owned utility in Vermont: Green Mountain power.

Purpose of this bill LD1708 is to increase reliability, reduce cost, allow local ownership which would respond to local needs & help speed transition to zero emission carbon negative society to stop climate change.

In recent years there have been more power outages for longer durations & customers have been badly overbilled with major errors in invoices received from CMP which is owned by U S subsidiary of an investor owned Spanish corporation - Iberdrola. Existing structure is a single point of failure & national security danger. The CMP Corridor seeks to destroy the largest wild forest east of Mississippi River to add a high voltage power line from Canada to serve Massachusetts. Much false advertising has been saturating the media at expense of ratepayers to make this happen. The overwhelming majority of witnesses at hearings on this were opposed. Yet construction seems to have started.

We need to return authority to customers & power to the people.

Please vote ought to pass on this bill to create a customer owned utility.

Best regards,

Randall Parr
