Searsport
LD 1549

I support LD1549, the act to "Seek Informational Bids Regarding Small Modular Nuclear Reactors". There should be no resistance to viable alternatives for clean energy that can favorably compare to other sources presently available. This initial phase of encouraging prospective investment in this very efficient clean energy system is a definite move in the right direction for the state of Maine. Energy costs will continue to increase rapidly and the best way to minimize costs is to allow proven technologies to be supported and encouraged. This bill should be unanimously passed.
