Fayette
LD 1895

I am writing as a constituent to express my strong support for LD 1895, which builds upon top recommendations from Maine's Offshore Wind Roadmap. The Gulf of Maine has some of the strongest and most consistent wind in the world, and we have an opportunity to develop this renewable energy resource in a responsible and equitable way. It is imperative that the state of Maine enact this legislation. It will help the United States move forward toward a carbon-free future -- something that we must accomplish. This legislation to procure energy from offshore wind resources also would strengthen Maine's economy by creating thousands of new high-quality jobs and stabilizing energy costs by reducing our reliance on imported gas and oil. It also sets high standards for wildlife, fisheries, and environmental monitoring, while also requiring important labor protections and providing benefits for Maine's most vulnerable communities.
