I am for LD 1895

I do not want wind energy at all because they are detrimental to all sea life during the process and hearing scale that BOEM does not measure on. The electricity cables will cause harm and immobile crustaceans. BOEM will tell you the seismic or sonar does not affect sea life.. but they are not using the same scale that sea co life actually uses. There are many farms in place that have already seen the affects. We need to learn by them. That being said.. if we have to have wind farms... they need to be outside of LMA1 because 80% of us rely on this income. This will be detrimental not only to Maine but to the government who will have to support communities like mine that travel long distances to even get to a MCdonalds or any kind of restaurant.
