

Jack Peach  
Renewable Properties  
LD 1986

Renewable Properties, a solar developer with operating projects in Maine, supports LD 1986 and the development of the Distributed Solar and Energy Storage program.

The program will enable the deployment of cost-effective distributed solar and energy storage systems in the state. These projects provide numerous benefits and can enable significant reductions in the costs associated with energy and grid infrastructure. In addition, this program will be consistent with the recommendations provided by the Distributed Generation Stakeholder group. These recommendations are the product of engagement from industry figures, technical experts, and public input. As such, the program's final design will be shaped by the input of a wide range of stakeholders.

This bill will make clean, cost-effective renewable energy available to Maine ratepayers and provide the opportunity for future customers to access savings on their energy bills through these projects. Renewable Properties supports LD 1986.
