I hope you will vote that Bill 342: An Act to Include Nuclear Power in the State's Renewable Portfolio Standard 'ought not to pass'. Despite assurances by companies involved with nuclear power, with current technology and practices, it is a dangerous source of energy. Accidents are serious. The challenge of keeping these plants secure is also serious. It's also not clean or affordable and its storage presents hazards longer than humans have been on this earth. Even transporting their waste is dangerous.

I do not want my tax money to subsidize these dangerous plants or to shield them from liability, which would be necessary for them to be built in Maine.
