LD 227

I will not be present to testify, but I would like to state that I am in favor of the proposed legislation LD 227 which would protect reproductive and gender affirming care for patrons, health care providers and health care infrastructure. The health decisions of individuals and their providers are extremely personal and should NEVER be part of a political football. These are civil rights that have been fought for, and won, and have strengthened individual freedoms in our country. A Democratic government is guided the by the citizens and representatives in that government need to be responsive to their constituents. Personal health issues are between a person and their doctor - there is no place for them in the halls of government.
Thank you.
