I do not support this bill.

Maine is a poverty state, and we have the 2nd highest state tax burden in the country. Heard Mills and friends are putting a 70 cents tax on prescription.

Well, we might as well be first in the nation in the highest taxes. The government officials in ME are so out of touch with the people.

There was a report about the Maine government investigating how to use Artificial Intelligence (AI). Maybe cognitive reasoning of AI can enlighten the officials as to why this state is such a mess.

No mention about the poor educational rating ME was given, no mention about all the illegal marijuana farms popping

Is there ever a solution besides raising taxes?
