We support a water level of PFAS to be below 27 PPT MCL. This chemical is known to be harmful to humans and should not be in drinking water. Our home value is drastically affected by having this substance in our water because of dumping of firefighting foam by the US Navy in our area. We have installed a drinking water system at our own expense because the Navy will not do anything for wells found to be under 70 PPT. Our well tested at 34 PPT. If any of you would be willing to consume this water daily in large quantities then I guess you will vote to have 70 PPT as the level. Please do not make decisions based on ideas not scientific facts because there aren 't any. Please vote 20 or less for our community and future generations.
