I am for LD 867. I would like this bill to pass. The Covid vaccine is too new to mandate. It needs more testing and time in order for those who are hesitant to feel more comfortable with it. And since it does not stop the spread of Covid as originally intended, it lessens the severity in those who choose to receive it, it should therefore be each individual's choice whether or not he or she wants to get it. Also, I saw on the news tonight that hospitals are now allowing Covid-infected employees to come to work because they don't want to be short staffed. This is one of the most hypocritical and absurd things I've seen so far with this virus! We can't allow thousands of healthy UNvaccinated workers to keep their jobs when there's a serious labor shortage, but we CAN allow INFECTED vaccinated workers, who can and will spread the virus, to go into work?!? I'd say the state of Maine has officially gone mad if we're actually allowing this!
