I am for the proposed legislation. The science is showing there are significant side effects/deaths on children and young adults, as well older adults. With regards to children/teenagers the vaccine has only been available to them for about 6 months and we have seen significant side effects on a disease that has very little consequences on them. Not only that, the vaccines have been scientifically proven not prevent one from catching or spreading Covid. There needs to be more research and time in order to make sure this shot is safe.
