

Teri DeSimone
waterboro

Good Day,

I am writing on behalf of LD867

I strongly recommend this bill needs to pass.

We all know covid 19 vaccines do not work as intended. I personally know eight family members fully vaccinated and boosted who now have the corona virus. Two of these people were mandated by employer.

We are in clinical trials for COVID vaccines.

Despite every clinical trial always gives out reports and statistics at certain periods of time during the trial

. I have yet to see one for covid vaccines.

This is extremely concerning for the safety of our friends, families, and children.

Dr. Anthony Fauci testifying before Congress

In May of 2020. Testified to what could go wrong
Is a vaccine is rushed.

Dr Fauci's Quote:

"I must warn that there is also the possibility
Of negative consequences where certain
Vaccines can actually enhance the negative effects
of the infection. The big unknown is efficacy.
Will it be present or absent, and how durable will it
be"

This statement alone should make us all take a pause.

We all know you can catch and spread the virus
fully vaccinated. The efficiency of this vaccine is at
an all-time low. This is a failed vaccine.

I am extremely concerned for our young people.

They are not as affected by covid. My concern is that
the vaccine is harming much more people than it is
helping.

It's time we paused this mandatory vaccine.

My daughter was hurt by a vaccine many years ago.

I have a note from the pediatrician who gave her the
vaccine. When you do what the government says CDC
then they are hurt for life. You feel betrayed and hurt.

Why didn't I do more research?

You can not forgive yourself. This is what many
families in Maine are dealing with right now.

It's absolutely heartbreaking! Please pass LD867

For our children ♥☐
