

Senator Claxon, Representative Meyer and esteemed committee members, my name is Al Fereshetian and I reside in Turner. I want to testify on behalf of LD867 and I respectfully ask that your recommendation on this bill would be “ought to pass.”

My 30-year-old daughter, a nurse, has been experiencing fertility difficulties for the past three years. Consequently, she is not willing to take the vaccine at this time, recognizing the problems she is currently having. So far she has been fine, but if these mandates continue she may end up losing her job.

Considering the intent of this bill is to allow adequate time for proper and comprehensive testing and study related to the potential of reproductive harm, I would like to point your attention to a very thorough report recently released by the Canadian Covid Care Alliance. This is a group of over 500 doctors, lawyers and scientists including virologists, vaccinologists, immunologists. They reported on many procedural errors and reporting inaccuracies of the original Pfizer trial report that came out in December 2020. This report served as the basis for the eventual Emergency Use Authorization that has led to many of the government imposed Covid vaccine policies and mandates. I have copied a link to this 30-minute presentation to this report. I highly recommend that you review it fully and thoroughly as you will find out that many of these policies and mandates that have been imposed are based on faulty evidence and improper scientific study practices.

For the case of this testimony however I want to focus on a minute and 30 second segment of this report (10:55-12:20). It indicates that the Pfizer study was never set up to represent the most vulnerable members of the population, instead it was largely conducted on a younger, healthier population which would naturally be less likely to experience negative consequences from the experimental inoculation. Additionally, and specifically to the point of this bill, Pfizer excluded “**pregnant women and breast-feeding women**” along with a number of other compromised groups. The CCCA makes the correct conclusion that these inoculations have not been tested on these fragile groups, yet these groups **have not** been excluded from government imposed Covid policies or mandates. These groups are being told that it is safe to take these inoculations when in fact it has never been proven that it is safe for these groups. This should not be and is not right!

Pfizer initially claimed that these inoculations had a 95% efficacy, (this report demonstrates the error of that assessment) we now know that it wanes to nearly zero in a little over 6 months. Recent research from Denmark has demonstrated that Omicron spread is “2.61 times higher for fully vaccinated and 3.66 times higher for booster-vaccinated individuals” which demonstrated that these inoculations are not vaccines in the proper definition of the term as they do not prevent the spread of the virus. In fact, you may fully know that the CDC had to actually change the definition of vaccine last summer based on the reality that these inoculations did not meet the long standing and accepted definition.

In conclusion, thank you for your time and careful deliberation of these testimonies and in light of the initial faulty science by Pfizer and with consideration of the lack of effectiveness these inoculations have provided, it is extremely dangerous to proceed with current governmental Covid policies and mandates. I urge that you render an “ought to pass” decision on this bill.

Turner

Senator Claxon, Representative Meyer and esteemed committee members, my name is Al Fereshetian and I reside in Turner. I want to testify on behalf of LD867 and I respectfully ask that your recommendation on this bill be "ought to pass."

My 30-year-old daughter, a nurse, has been experiencing fertility difficulties for the past three years. Consequently, she is not willing to take the vaccine at this time. If these mandates continue she may end up losing her job and her livelihood.

I would like to share a very thorough report recently released by the Canadian Covid Care Alliance. This is a group of over 500 doctors, lawyers and scientists including virologists, vaccinologists, immunologists. They reported on many procedural errors and reporting inaccuracies in the original Pfizer trial report that came out in December 2020. This report served as the basis for the Emergency Use Authorization that has led to many of the government imposed Covid mandates.

This report demonstrates that the Pfizer study was never set up to represent the most vulnerable members of the population, instead it was largely conducted on a younger, healthier individuals who would naturally be less likely to experience negative consequences from the experimental inoculations. Specifically, to the point of this bill, Pfizer excluded "pregnant women and breast-feeding women" along with other compromised groups. The CCCA makes the correct conclusion that these inoculations have not been tested on these fragile groups, yet these groups have not been excluded from government imposed Covid mandates. They are being told that it is safe to take these inoculations when in fact it has never been proven that it is safe for these groups.

Thank you for your time, please review this information carefully and vote for LD 867 "ought to pass".
