

Martha Fournier
Old Orchard Beach

Greetings to the Representatives and the Committee on Health and Human Services,

I am writing in response to LG867.

I believe that this bill would allow necessary time for more safety testing and, as a woman, investigations into any reproductive harm. I am in favor of this bill, as the Covid-19 vaccines seemed rushed, and the safety process abbreviated. The vaccines are so brand new and absolutely need more time for data analysis, investigating all the benefits and or repercussions.

There have been many confusing and conflicting messages along the way with this pandemic about safety precautions such as masks, gloves, hand sanitizer, etc. In turn, the vaccines seemed fast tracked through in the process, only to provide not entirely what they promised, adding another confusing message.

I support giving science the appropriate time to do what science needs to do, in order to make sure that these vaccines are absolutely safe.

I hope this bill is approved, as it'll allow some necessary time to ensure that we're thinking and acting in terms of humanity, care and safety for all.

Thank You for your time,
Martha Fournier
