This is in regard to LD 867. I am for this bill. As a registered democrat, I don't want to lose faith in the voices of the people being truly heard by those representing them. Please hear my voice because it speaks for so many who are afraid to speak out. This bill should pass to allow the necessary amount of time ensure that proper studies are done to make sure that the risk does not outweigh the benefits of these vaccines. We just don't have enough information yet to make these kind of mandates. Especially on something that seems to have limited efficacy. People should have the right to choose what is right for themselves and their families. This is just too new. Look at the false hopes from the vaccine so far. First it was one or two shots to solve all our problems. Now its a booster, and even that isn't working as expected. How many boosters will it take? Covid is spreading like wildfire despite widespread vaccination rates. This alone is cause for a pause and it shows how rashly this whole thing was rolled out without the science to back it. I am NOT an "anti-vaxxer". I have always supported safely studied vaccines and have never refused them for myself or my kids. The covid vaccine just isn't there yet! Let's give this the needed time to let the science speak to us and inform our decisions.
