Wouldn't it be extremely wise to allow full research and testing to be done in order to ensure the safety of all citizens before injecting them with an 'emergency use' vaccine. The FDA's guidance on emergency use authorization of medical products requires the FDA to "ensure that recipients are informed to the extent practicable given the applicable circumstances... [t]hat they have the option to accept or refuse the EUA product-See: 21 U.S.C. & 360bbb-3(e)(1)(A)(ii)(I-III)

Is everyone who received the vaccine been given informed consent? Are they aware of the reports of deaths and injuries according to the CDC's VAERS website? This report (Vaccines Adverse Event Report) required by Federal Law to be maintained by the pharmaceutical companies <https://openvaers.com/covid-data>.

The current president of this nation has repeatedly stated that if you are vaccinated, you are safe and cannot get the virus. Why should those already vaccinated be concerned about the unvaccinated if they are 'safe'?
