Newcastle

I am for the proposed legislation. This bill should pass. If we do not have the right to say what goes into our own bodies, then we are not free people - we are just slaves of the state. My sister took the injection - tumors appeared in her breast and underarm lymph glands. She has had her breasts removed and is now recovering. This is a well known side effect of these experimental gene therapies.

Please pass this bill for the protection of our Maine citizens and children - our most valuable resource for the future - until the proper safety testing has been completed.
