To Whom it May Concern:

As a long time Maine resident, please consider my support of LD 867. These vaccines are still in the experimental phase and there are too many unknowns on current and long term side effects. VAERS lists more than 20,000 deaths and over 1,000,000 adverse events. This data cannot be ignored any longer. Peoples' lives are at stake. My father has not been well since being fully vaccinated. He got covid one month after his booster shot. He's always only had minor high blood pressure. Since being fully vaccinated, he's been in and out of the hospital and doctors' offices with various illnesses since. Without long term safety data, and based on current data, we cannot continue to mandate these shots.

Thank you for your consideration in doing the right thing.
