

Dr. Paul Kuehnert  
Hallowell, ME

As a registered nurse and a public health practitioner, I strongly oppose LD867. This bill has absolutely no basis in any objective facts and is part of a concerted disinformation campaign. COVID-19 vaccines that are being distributed in the US (manufactured by Pfizer, Moderna, and Johnson & Johnson) have been thorough tested, evaluated, approved by the FDA and the national CDC and have now been given to literally millions of US residents and residents of many other countries. The vaccines are safe and effective. There is absolutely no basis for the concerns about reproductive harm from these vaccines. LD867 should be rejected by the Committee.
