I am in support of LD867. There is too much factual information the "vaccine" is harmful to our children.

Data as of Sunday, January 9, 2022
Total Maine vaccine doses: 2,408,363
First Dose: 939,349
Final Dose: 902,801
Booster: 566,213

In a state of just over 1.3million how are cases skyrocketing with so many vaccines administered?

Children are getting infected however they are recovering and showing immunity long after infection. My daughter had covid in April of 2021, we had her antibody tested in December and she had well over the minimum needed for immunity and this was 8 months after infection.

Current vaccine rate is indicative the breakthrough cases are going to continue to rise.
