

Senator Claxon, Representative Meyer and esteemed committee members,

Thank you for considering my testimony in favor of LD 867.

My name is Rebekah Libby. I'm a licensed Assisted Living Administrator and a resident of Berwick. I have dedicated myself to caring for the elderly for the past 15 years, but in October found myself unemployed. I have been unable to find employment in the healthcare field due to the vaccine mandate in our state.

Not only has this affected my family financially, but I have multiple medical conditions that have been left untreated due to a lack of medical insurance.

I am hesitant to be vaccinated due to the reactions my immediate family have experienced, and lack of long-term safety studies. My father had a documented adverse reaction which took 7 months of medication to alleviate, and my otherwise healthy 24-year-old son, has experienced multiple medical symptoms including cardiac problems which physicians suspect are vaccine related.

Allowing the scientific community the years required to conduct long term studies will allow them to identify conditions that may be vaccine related in addition to viable treatments for those who may have already suffered them, like my family.

I am respectfully asking you to vote Ought to pass for LD 867.

Thank you for your time,
Rebekah Libby
