

Nancy Norton  
Portland

To Senator Claxon, Representative Meyer and esteemed committee members,

My name is Nancy Norton and I live in Portland. My husband lost his job of 11 years as a Simulation Specialist at Maine Medical for not getting one of the still EUA covid "vaccines". My husband Todd was recruited for this position. He started the Simulation Center and took great pride in serving Maine Health. Todd was given a medical exemption from his doctor that Maine Medical Center denied. For us there was no choice on our decision. Taking a vaccine that his doctor worried he would react poorly to and that has not had long term testing was not an option. My husband was not granted Unemployment due to the mandate. We are now financially struggling to make ends meet. He was our families main bread winner. Now paying for health insurance, morgage, heat, groceries etc. are a weekly stress that has no end in sight. This has caused our family hardship beyond reason.

The EUA "vaccines" are a treatment for Covid...not a traditional vaccine. The shots lower your risk of severe illness. This is important for people with commodities or the elderly. However, for healthy Americans this should not be mandated. This week there are 800 healthcare workers with Covid at Maine Health. Breakthrough cases are rising every day. These vaccines are not the answer.

The covid vaccines have the most recorded side effects and deaths out of any vaccine introduced to the public in history. VAERS numbers are staggering and important. Long term testing would have shown us all of this information without causing citizens to lose their source of income, permanently disabling innocent people and tragically death from an adverse reaction.

Thank you for you time,  
Nancy Norton
