Hello,

I am writing to you in support of LD867. A vaccine mandate would go against the core medical ethical principles, that is beneficence, nonmaleficence, autonomy, and justice. Informed consent must be made with any medical procedure and thus far since these injections were made EUA available, there has been absolutely no informed consent. We've witnessed at a grand scale deceit, manipulation, threats, coercion, and consequence aimed towards public at large to get those who did not willingly hold out their arm without question injected with an experimental biologic. We are now seeing in hindsight that mass vaccination is clearly worsening our position in every possible way imaginable, and the public is paying for it. I see any future mandates as a last ditch effort to force those who've already chosen what's best for their health into an unspeakable position just to keep their livelihood. This is no longer in the name of health is and is completely and utterly shameful.

Add to this the professional experts have had a huge lack of competency in keeping their facts straight, with their conflicting advice and their ever changing interpretation of data to support their objective, is now looking like an orchestrated effort to confuse the public. With this, informed consent will never be possible, and therefor vaccine mandates are out of the question entirely. The public will most certainly continue to lose faith in the medical community and seek out alternatives if mandates come to fruition - which include leaving this beautiful state. Please do what is right and what is ethically moral for the people of Maine.

Mandates are not and never will be in the best interest of the public. The individual, every sovereign man, women and child should be valued and respected with what they choose to put in or on their body.

Thank you for your time, and I ask that you vote ought to pass on LD867.

Best,
Sarah Rand, mother and wife
