

Carl Tabor  
North Berwick

Dear Health and Human Services Committee,  
I fully support this bill and want to encourage our representatives to do the same.

Reasons to support the bill:

- (1) Covid-19 vaccines are experimental as no long-term testing has been completed. It is simply inhumane to force an experimental drug on the public without full knowledge of its consequences.
- (2) Dr. Robert Malone, one of the key inventors of the mRNA vaccine, is adamant about not mandating the mRNA vaccines.
- (3) There are safe treatments with decades of safety information available for the public to take should they be concerned about becoming ill or are ill with Covid-19.
- (4) Taking a Covid-19 vaccine is only about personal safety, not public safety. The vaccine does not stop a person from contracting Covid-19, nor does it stop transmitting it.

Taking the Covid-19 vaccine should be a personal choice after doing serious research and having a conversation with one's chosen health care professional, not a mandate from government officials. Thank you.
