My daughter was not given a medical exemption by her cardiologist to continue her studies at UMO for the COvid jab. She consequently suffered a reaction from her shot and now has severe allergy-induced asthma.

I beg that you block mandating this unnecessary shot for everyone. We are now looking at her health issues, but also how she will finish her education without the “recommended” booster that she cannot safely have.

This failed science experiment needs to end now, and people need to look beyond the fear.
