I am opposed to the mandating of COVID vaccines for children. As many doctors have seen in those children and adults being vaccinated already for COVID-19, there is a lot of adverse effects. Young people everywhere passing out due to heart issues and myocarditis (which is irreversible!) Vaccines as with any drug or medicine should be put through rigorous testing before administering to the public, especially children whose bodies are not fully developed! Being that children are not even at risk for serious illness or death from COVID virus, this push for vaccinating kids is irresponsible and unnecessary. Please think twice before injecting untested and unnecessary ingredients into our children. Please do more testing and listen to the outcomes of trials. So many people involved in trials were injured and discarded. How is this science? Stop mandating something that is causing harm to a lot of people. Let people make their own decisions! Thank you.
